

South Tyneside NHS Foundation Trust

Taking Organ Transplantation to 2020

South Tyneside NHS Foundation Trust had one consented donor during this time period and this patient did proceed to be an actual solid organ donor resulting in 18 patients receiving a life-saving or life-changing transplant.

Best quality of care in organ donation

Referral of potential deceased organ donors

Goal: Every patient who meets the referral criteria should be identified and referred to NHS Blood and Transplant's Organ Donation Service

Aim: There should be no purple on the chart

The Trust referred 13 potential organ donors during 2017/18. There was 1 occasion where a potential organ donor was not referred.

Presence of Specialist Nurse for Organ Donation

Goal: A Specialist Nurse for Organ Donation (SNOD) should be present during every organ donation discussion with families

Aim: There should be no purple on the chart

A SNOD was present for 3 organ donation discussions with families during 2017/18. There was 1 occasion where a SNOD was not present.

Why it matters

- If suitable patients are not referred, the patient's decision to be an organ donor is not honoured or the family does not get the chance to support organ donation.
- The consent rate in the UK is much higher when a SNOD is present.
- The number of patients receiving a life-saving or life-changing solid organ transplant in the UK is increasing but patients are still dying while waiting.

Regional donors, transplants, waiting list, and NHS Organ Donor Register (ODR) data

	North East*	UK
1 April 2017 - 31 March 2018		
Deceased donors	73	1,574
Transplants from deceased donors	126	4,012
Deaths on the transplant list	29	426
As at 31 March 2018		
Active transplant list	233	6,045
Number of NHS ODR opt-in registrations (% registered)**	975,059 (37%)	24,941,804 (38%)

*Regions have been defined as per former Strategic Health Authorities

** % registered based on population of 2.62 million, based on ONS 2011 census data

Further information

Further information on potential donors after brain death (DBD) and potential donors after circulatory death (DCD) at the Trust are shown below, including a UK comparison.

Key numbers comparison with UK data, 1 April 2017 - 31 March 2018						
	DBD		DCD		Deceased donors	
	Trust	UK	Trust	UK	Trust	UK
Patients meeting organ donation referral criteria ¹	3	1954	12	6281	14	7978
Referred to Organ Donation Service	3	1929	11	5615	13	7302
<i>Referral rate %</i>		99%		89%		92%
Neurological death tested	2	1676				
<i>Testing rate %</i>		86%				
Eligible donors ²	2	1582	9	4456	11	6038
Family approached	2	1471	2	1858	4	3329
Family approached and SNOD present	2	1394	1	1591	3	2985
<i>% of approaches where SNOD present</i>		95%		86%		90%
Consent ascertained	1	1066	0	1115	1	2181
<i>Consent rate %</i>		72%		60%		66%
Actual donors (PDA data)	1	955	0	613	1	1568
<i>% of consented donors that became actual donors</i>		90%		55%		72%

¹ DBD - A patient with suspected neurological death
DCD - A patient in whom imminent death is anticipated, ie a patient receiving assisted ventilation, a clinical decision to withdraw treatment has been made and death is anticipated within 4 hours

² DBD - Death confirmed by neurological tests and no absolute contraindications to solid organ donation
DCD - Imminent death anticipated and treatment withdrawn with no absolute contraindications to solid organ donation

Note that a patient that meets both the referral criteria for DBD and DCD organ donation is featured in both the DBD and DCD data but will only be counted once in the deceased donors total
