

# Why should I become an organ donor?

Organ donation is the act of giving an organ to save or improve the life of someone who needs a transplant.

You are able to donate some organs while you're alive, for example, a kidney, or part of your liver...

...but most organ and tissue donations will come from people who have died.

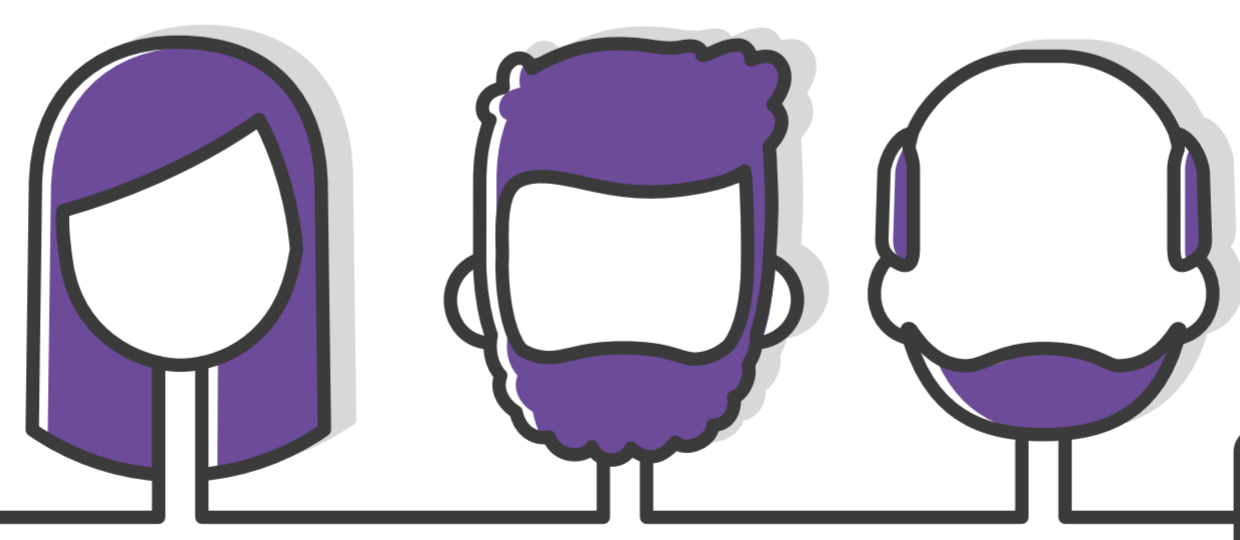

More than 50,000 people are alive today, across the UK, due to the generosity of organ donors and their families.

But right now, around 6,000 seriously ill people are waiting for a life-saving transplant.

You can register your decision to donate by signing up as a donor on the NHS Organ Donor Register and informing your family of your decision.

Three people die each day in need of a transplant.
