

NHS Forth Valley

Taking Organ Transplantation to 2020

In 2018/19, from 11 authorised donors the Board facilitated 8 actual solid organ donors resulting in 23 patients receiving a life-saving or life-changing transplant. Data obtained from the UK Transplant Registry.

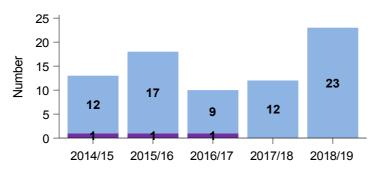

In addition to the 8 proceeding donors there were 3 authorised donors that did not proceed.

Best quality of care in organ donation

Referral of potential deceased organ donors

Goal: Every patient who meets the referral criteria should be identified and referred to NHS Blood and Transplant's Organ Donation Service

Aim: There should be no purple on the chart

Patients not referred Patients referred

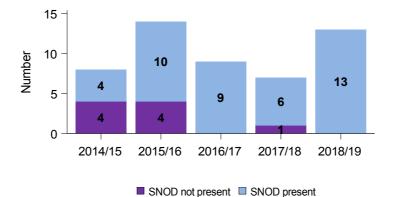

The Board referred 23 potential organ donors during 2018/19. There were no occasions where potential organ donors were not referred.

Presence of Specialist Nurse for Organ Donation

Goal: A Specialist Nurse for Organ Donation (SNOD) should be present during every organ donation discussion with families

Aim: There should be no purple on the chart

A SNOD was present for 13 organ donation discussions with families during 2018/19. There were no occasions where a SNOD was not present.

Why it matters

• If suitable patients are not referred, the patient's decision to be an organ donor is not honoured or the family does not get the chance to support organ donation.

• The authorisation rate in the UK is much higher when a SNOD is present.

• The number of patients receiving a life-saving or life-changing solid organ transplant in the UK is increasing but patients are still dying while waiting.
