

ADULT HEART TRANSPLANTS

How long do people wait for a heart transplant?

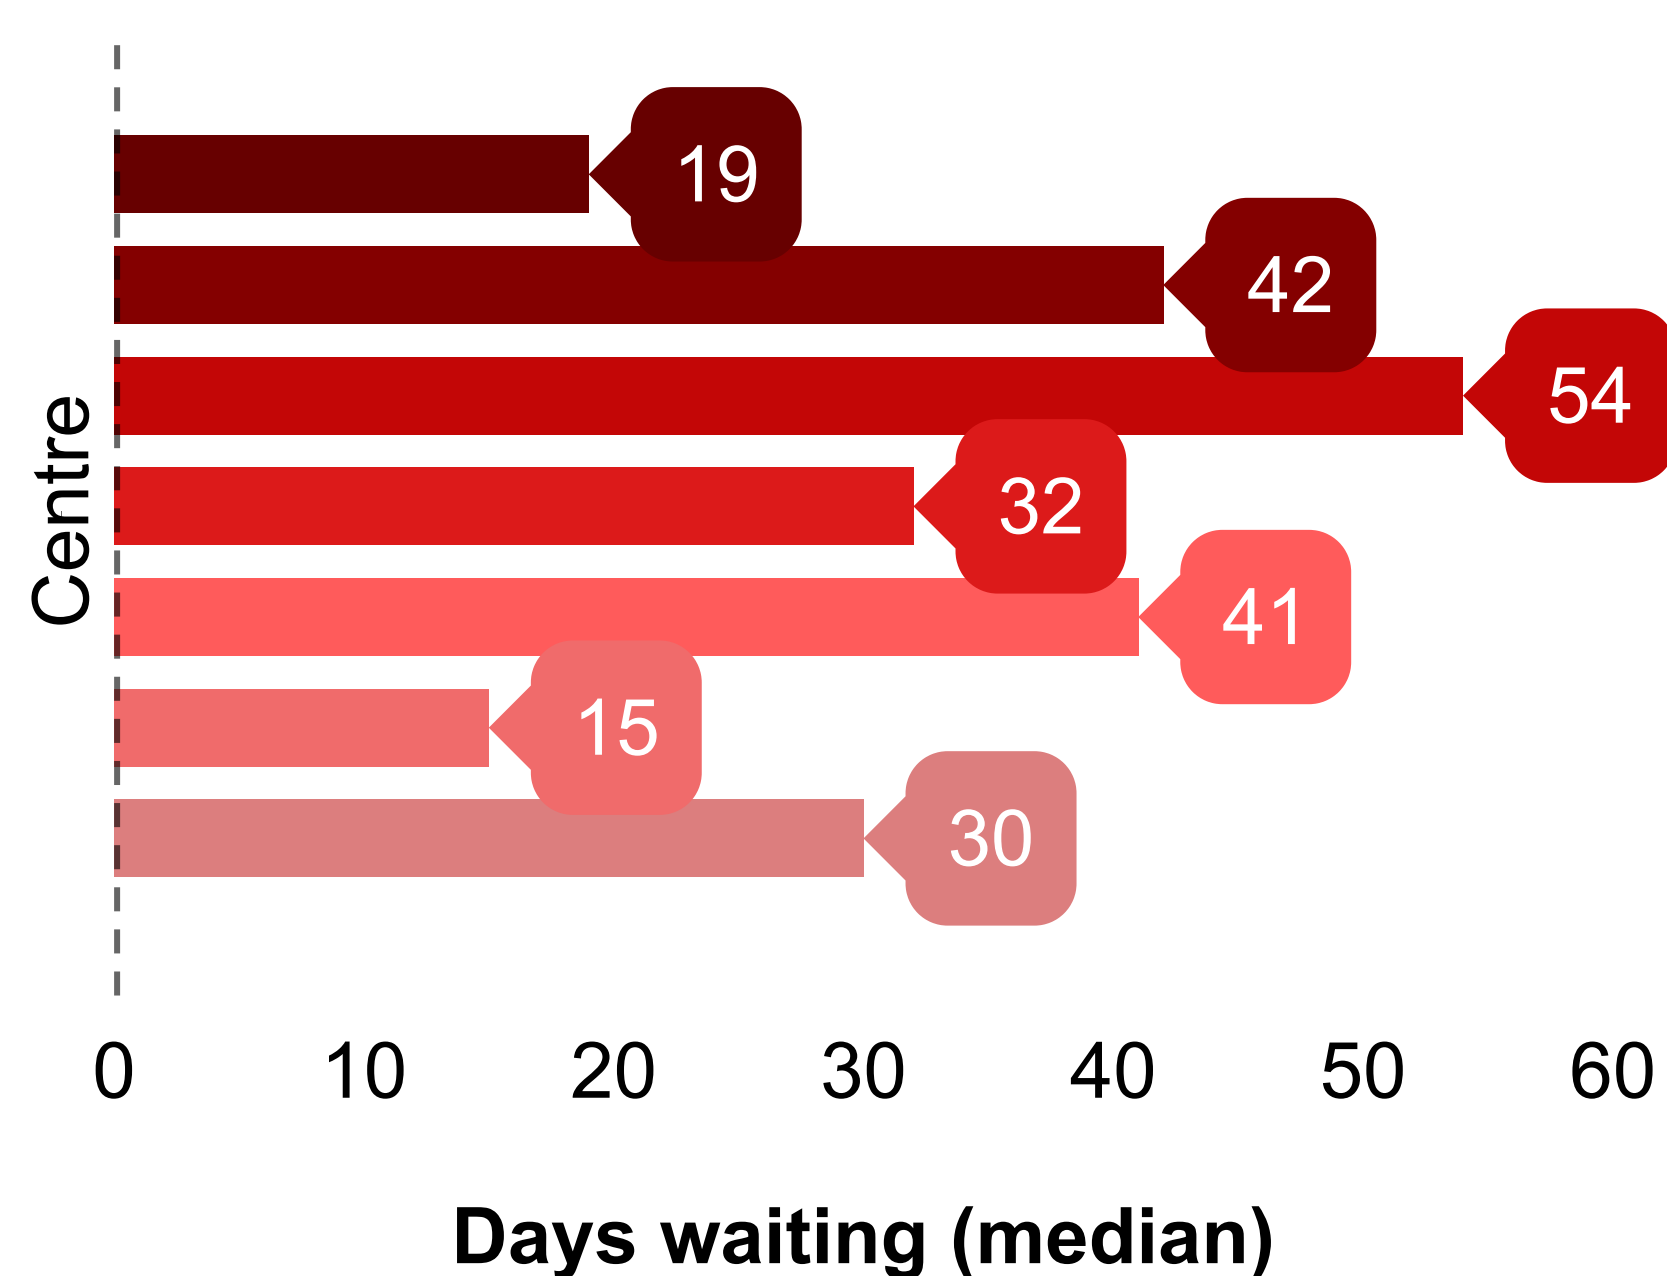

Non-urgent patients at initial registration

Registrations 1 April 2013 - 31 March 2016

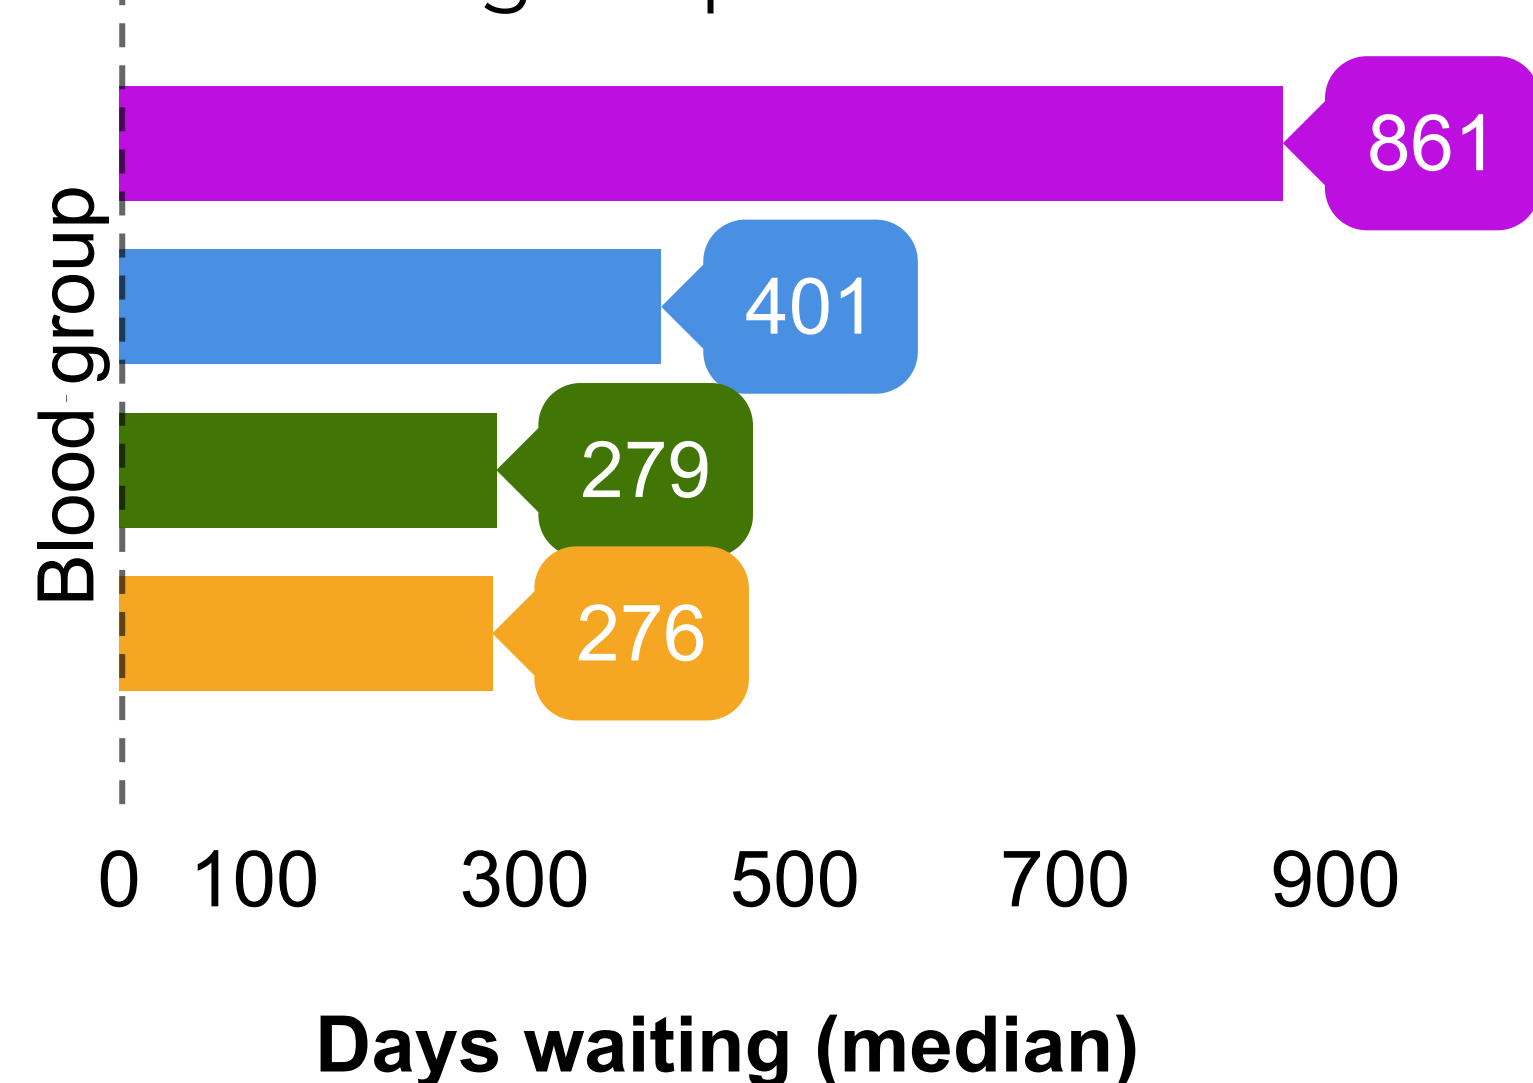

Urgent patients at initial registration

Registrations 1 April 2013 - 31 March 2016

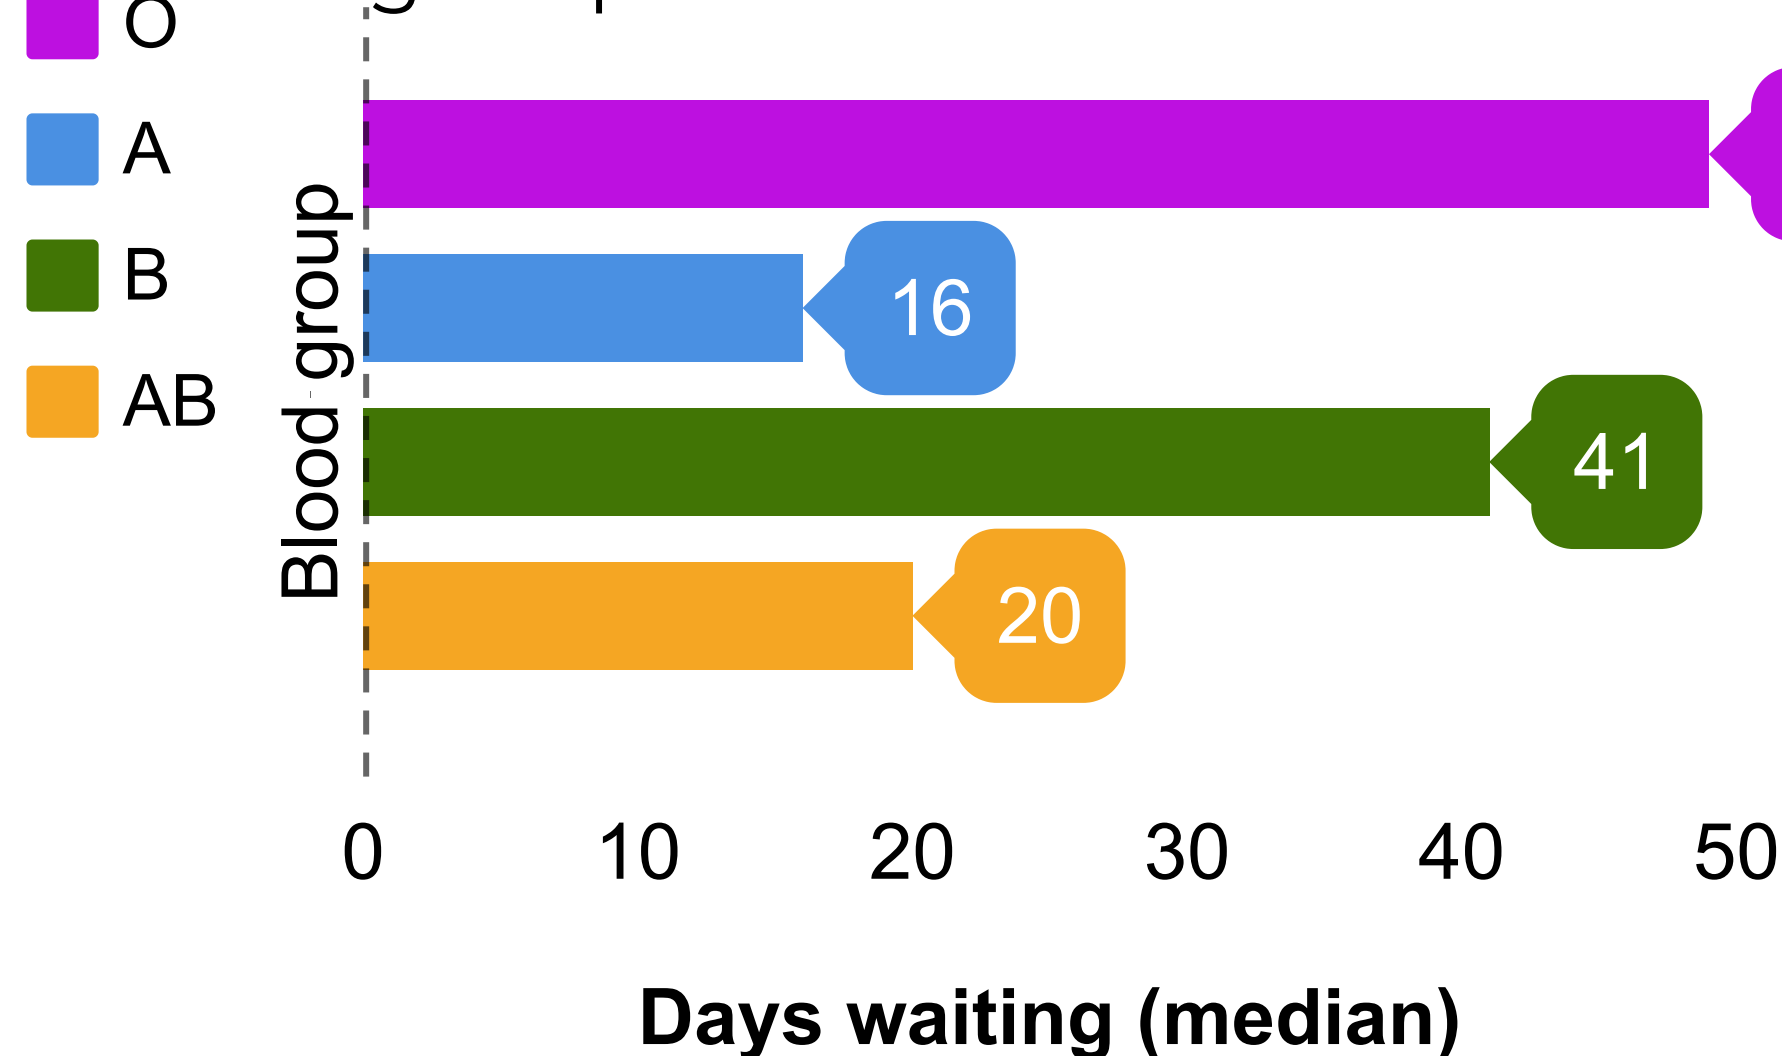

National waiting time by blood group

Non-urgent patients

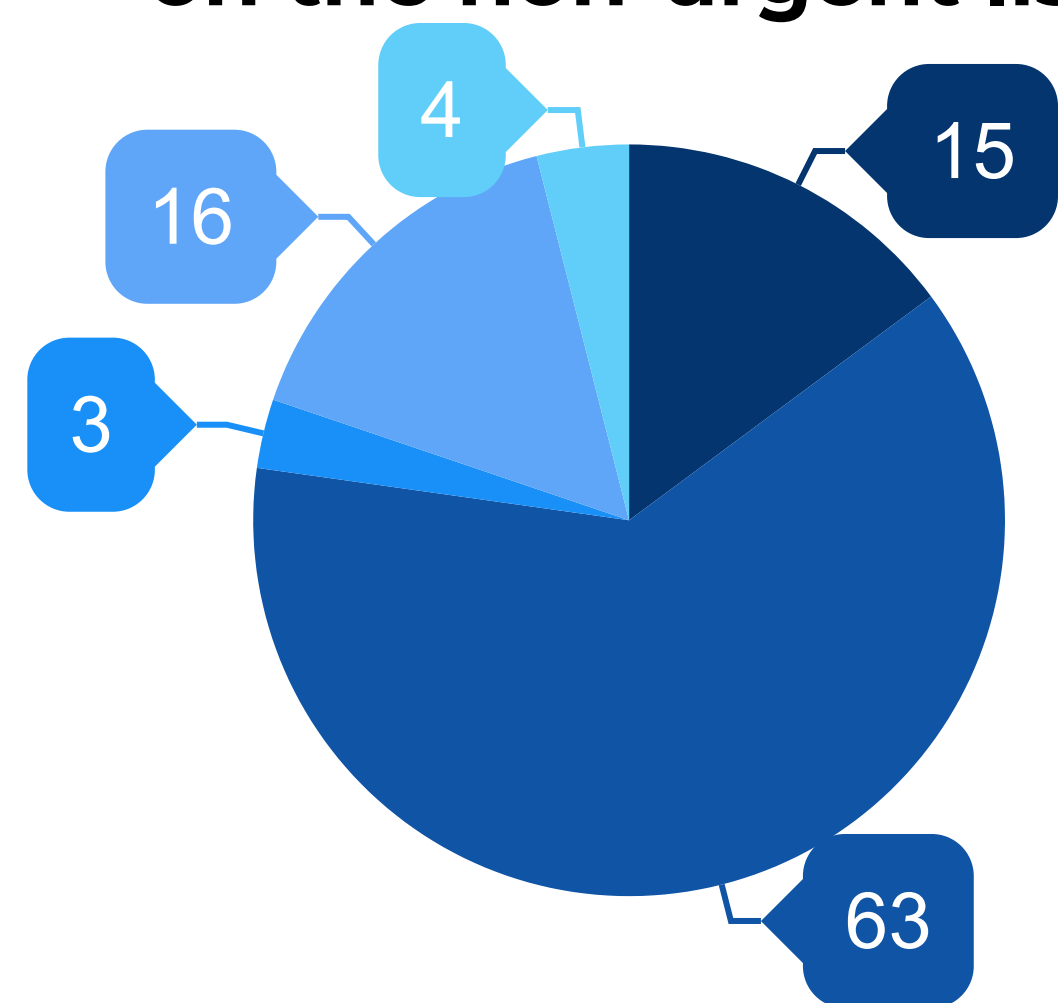

Urgent patients

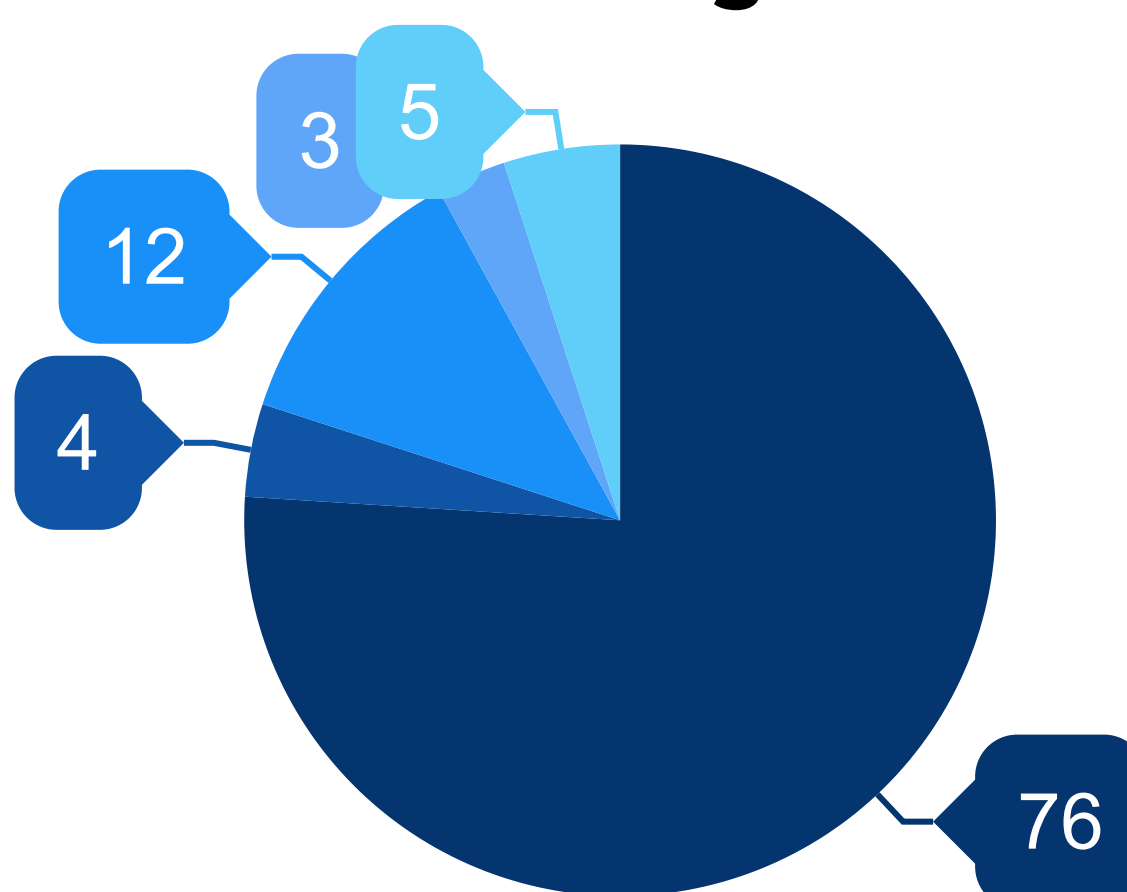

The median is a type of average and is the time when half of patients have received a transplant

Lots of things affect how long you might wait, including your blood group, presence of antibodies and the availability of the right size organs

Nationally, 6 months after going on the non-urgent list

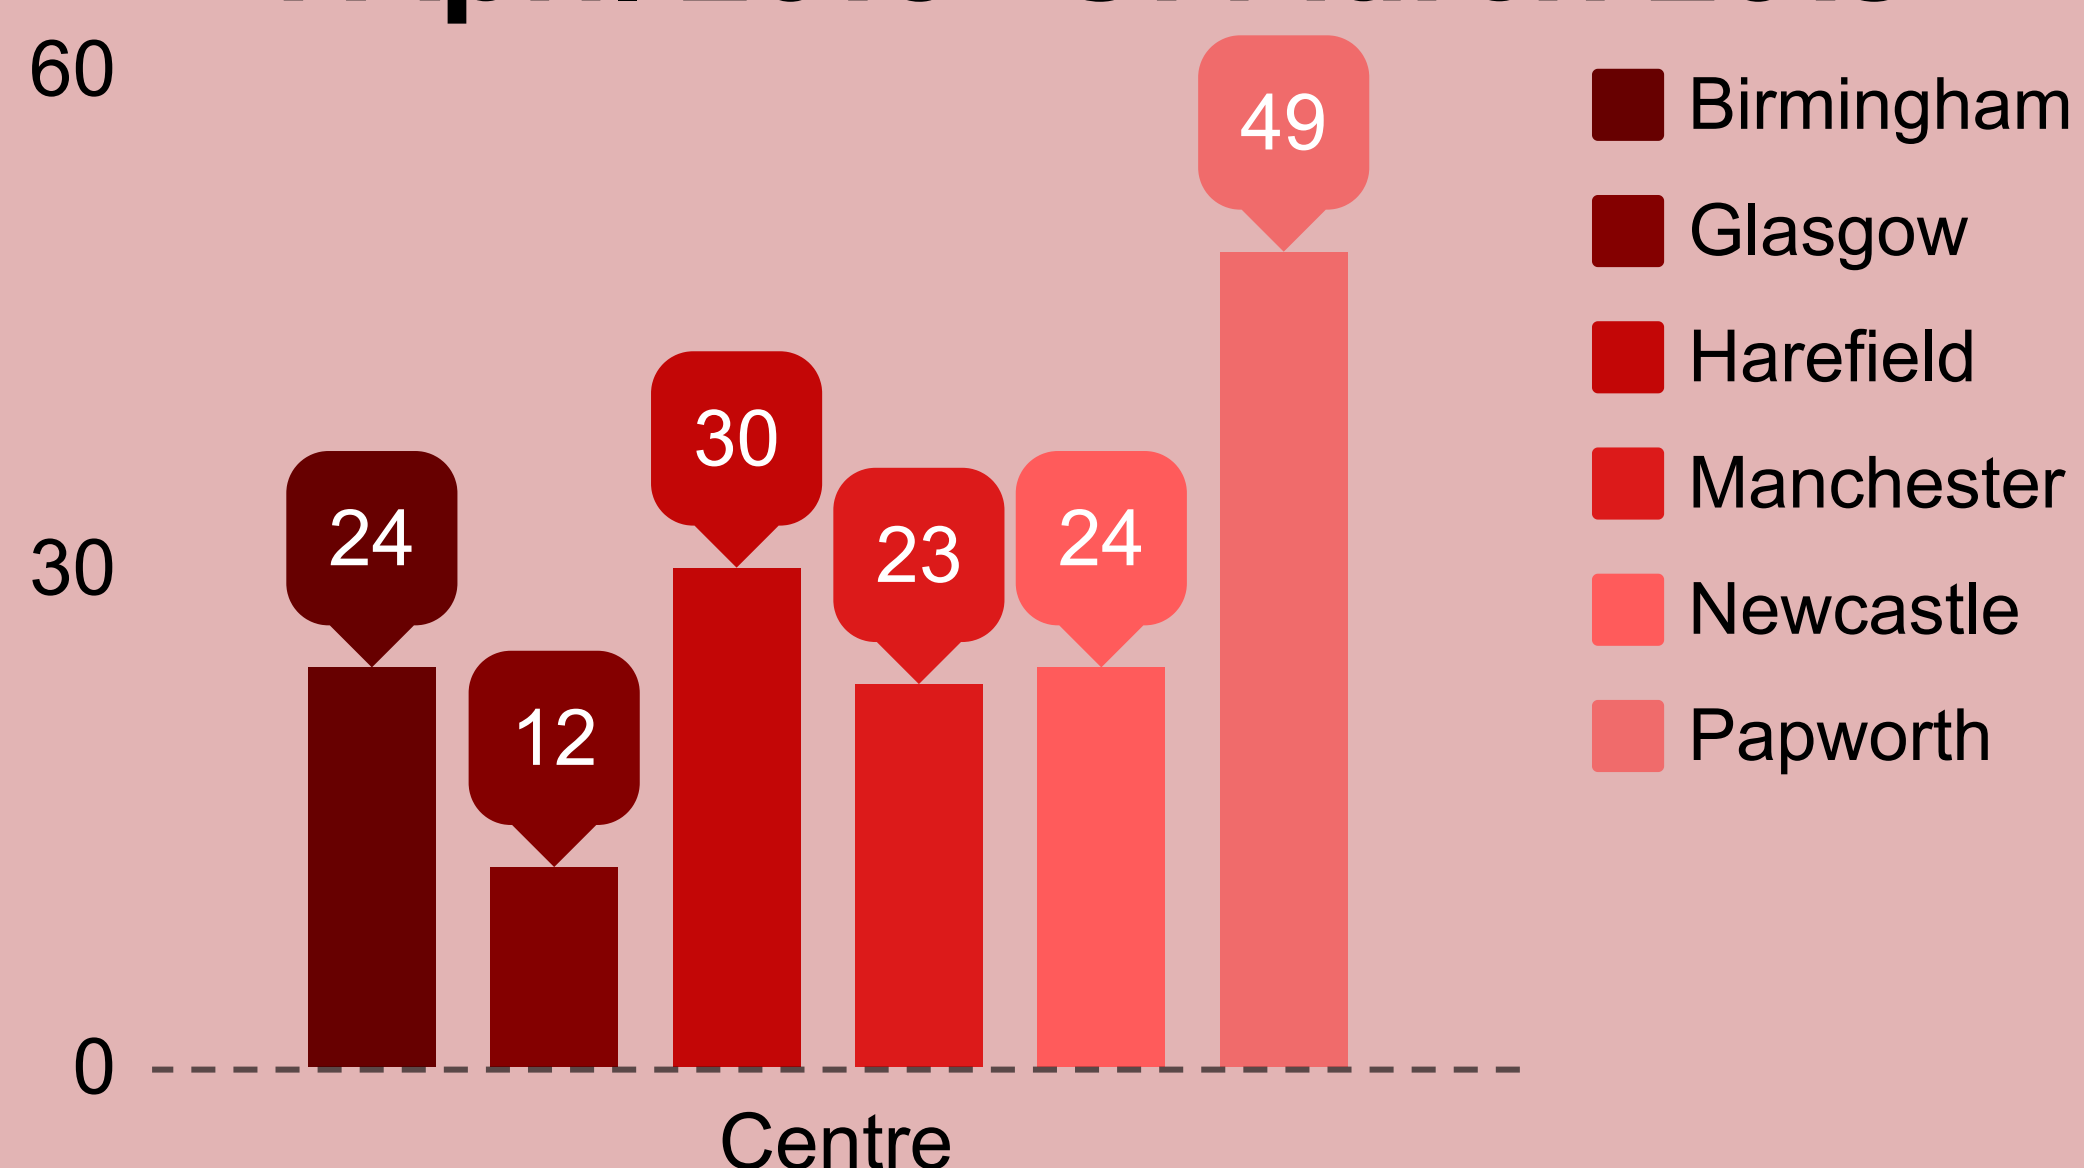

Nationally, 6 months after going on the urgent list

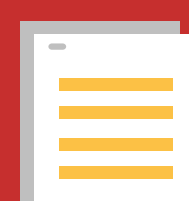

- % transplanted
- % still waiting
- % removed from the list
- % who became urgent / non-urgent
- % died waiting

Average number of transplants per year between 1 April 2016 - 31 March 2019

What are the chances of a person surviving for one year after transplant?

On average, 82 out of 100 adult patients are alive after one year following a heart transplant
