Kidney offering scheme – 3 month review

Matthew Robb

Overview

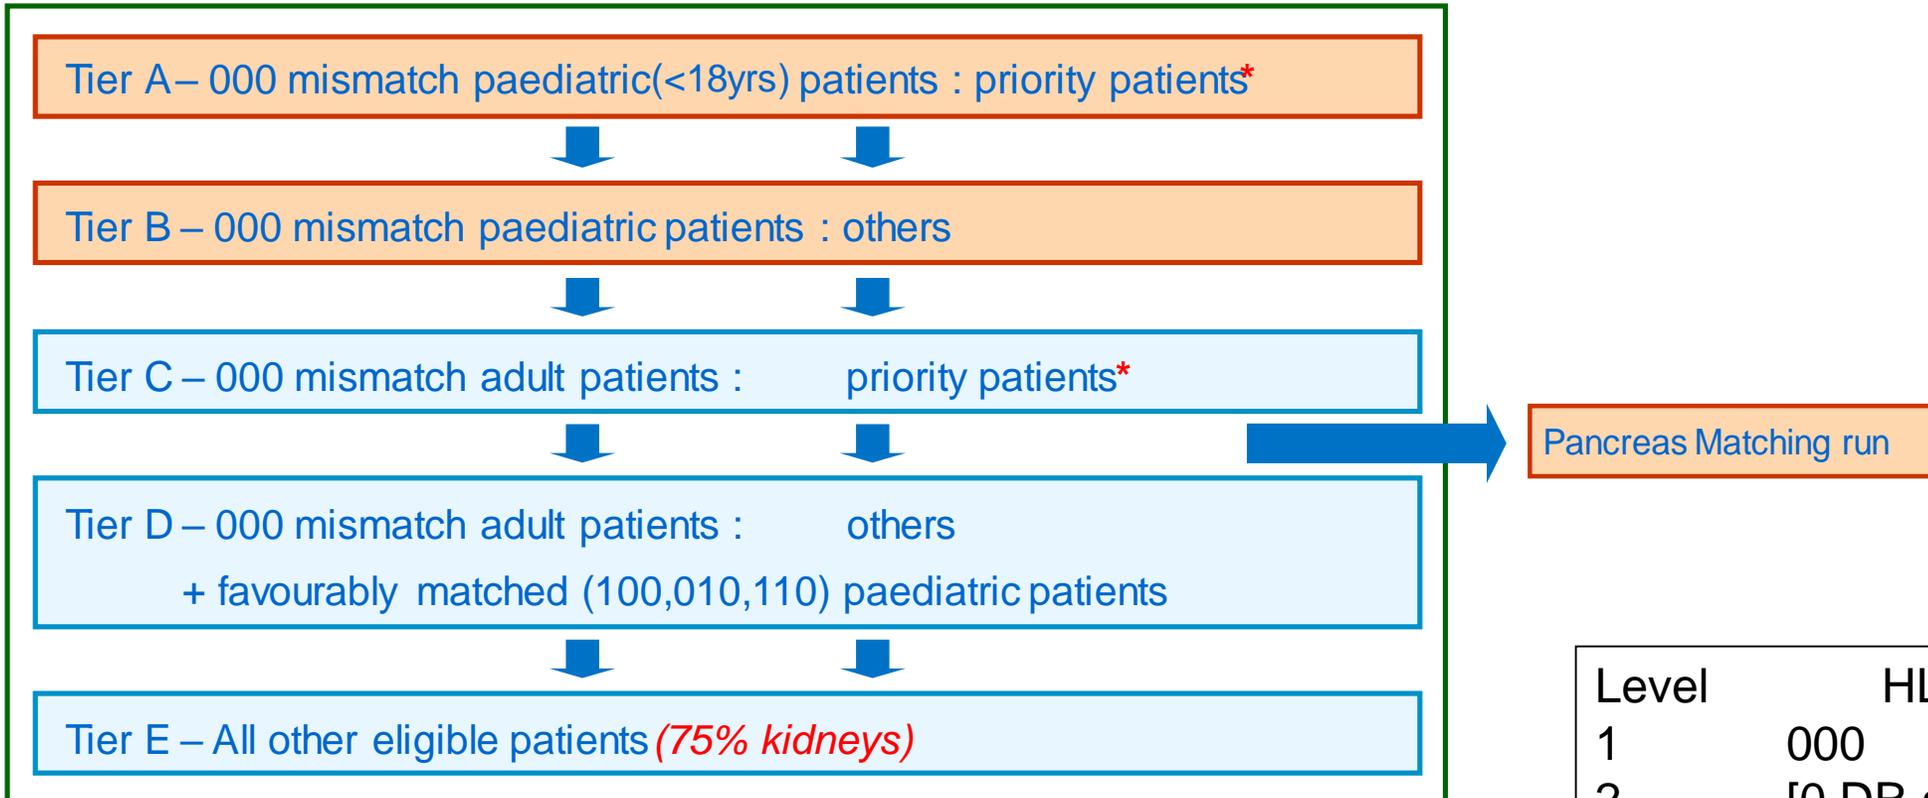

- Background to new scheme
- Principles and details of new scheme
- 3 month activity
- Early discussion points

History of kidney allocation schemes in the UK

- 1989 National sharing of one kidney from each DBD donor for a 'beneficial' (HLA-A,B,DR = 000,100 or 010) matched patient.
- 1998 Both kidneys from DBD donor allocated nationally for 000 mismatched adult and 000, 100, 010, 110 mismatched paediatric patients.
- 2006 National sharing for all DBD donor kidneys. Priority for all 000 mismatched patients. Novel form of scoring introduced to rank patients.
- 2014 National sharing of one kidney from DCD donors aged between 5 and 49 using 2006 DBD scheme principals

Summary of the 2006 KAS

All donors after brain death kidneys allocated by national rules -

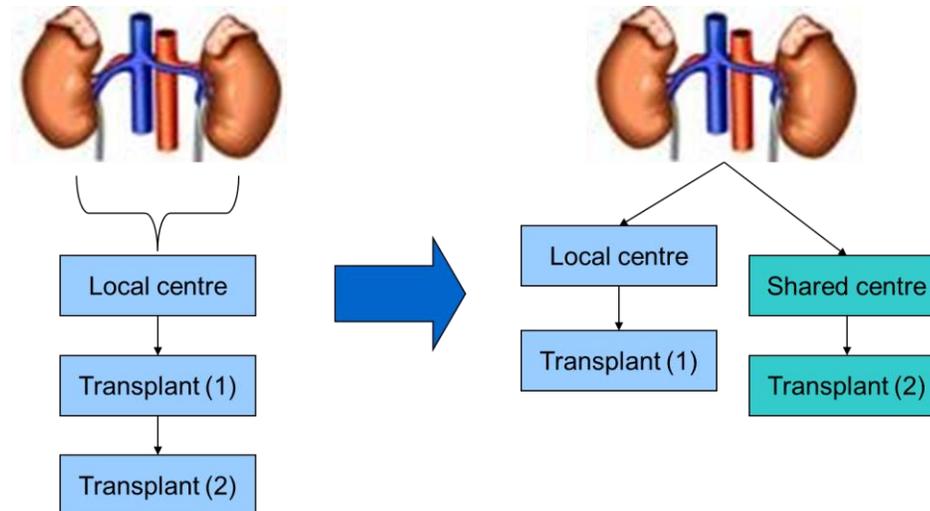

Restricted blood group compatible matches,
No level 4 mismatches

Level	HLA mismatch
1	000
2	[0 DR and 0/1 B]
3	[0 DR and 2 B] or [1 DR and 0/1 B]
4	[1 DR and 2 B] or [2 DR]

Summary of the 2014 DCD KAS

- One kidney retained locally, second kidney shared regionally within four pre-defined regions
- Kidneys allocated according to the 2006 DBD donor kidney allocation scheme principles
- Initially, this included donors aged 5-49, but was gradually increased to 5-64

Introduction

Key objectives of a new scheme

- Unify DBD and DCD offering with all DBD and DCD kidneys allocated through the scheme
- More effective 'longevity' matching between donor and recipient
- Better tailored HLA matching by age
- Geographical equity of access
- Waiting time from earliest of start of dialysis or activation on the list
- Age should be a continuous factor
- Avoid prolonged waiting times that are predictable – using matchability

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

Allow blood group O to B, HLA level 4 transplants

Within Tier A; patients prioritised by matchability score and waiting time from dialysis

Tier B All other patients

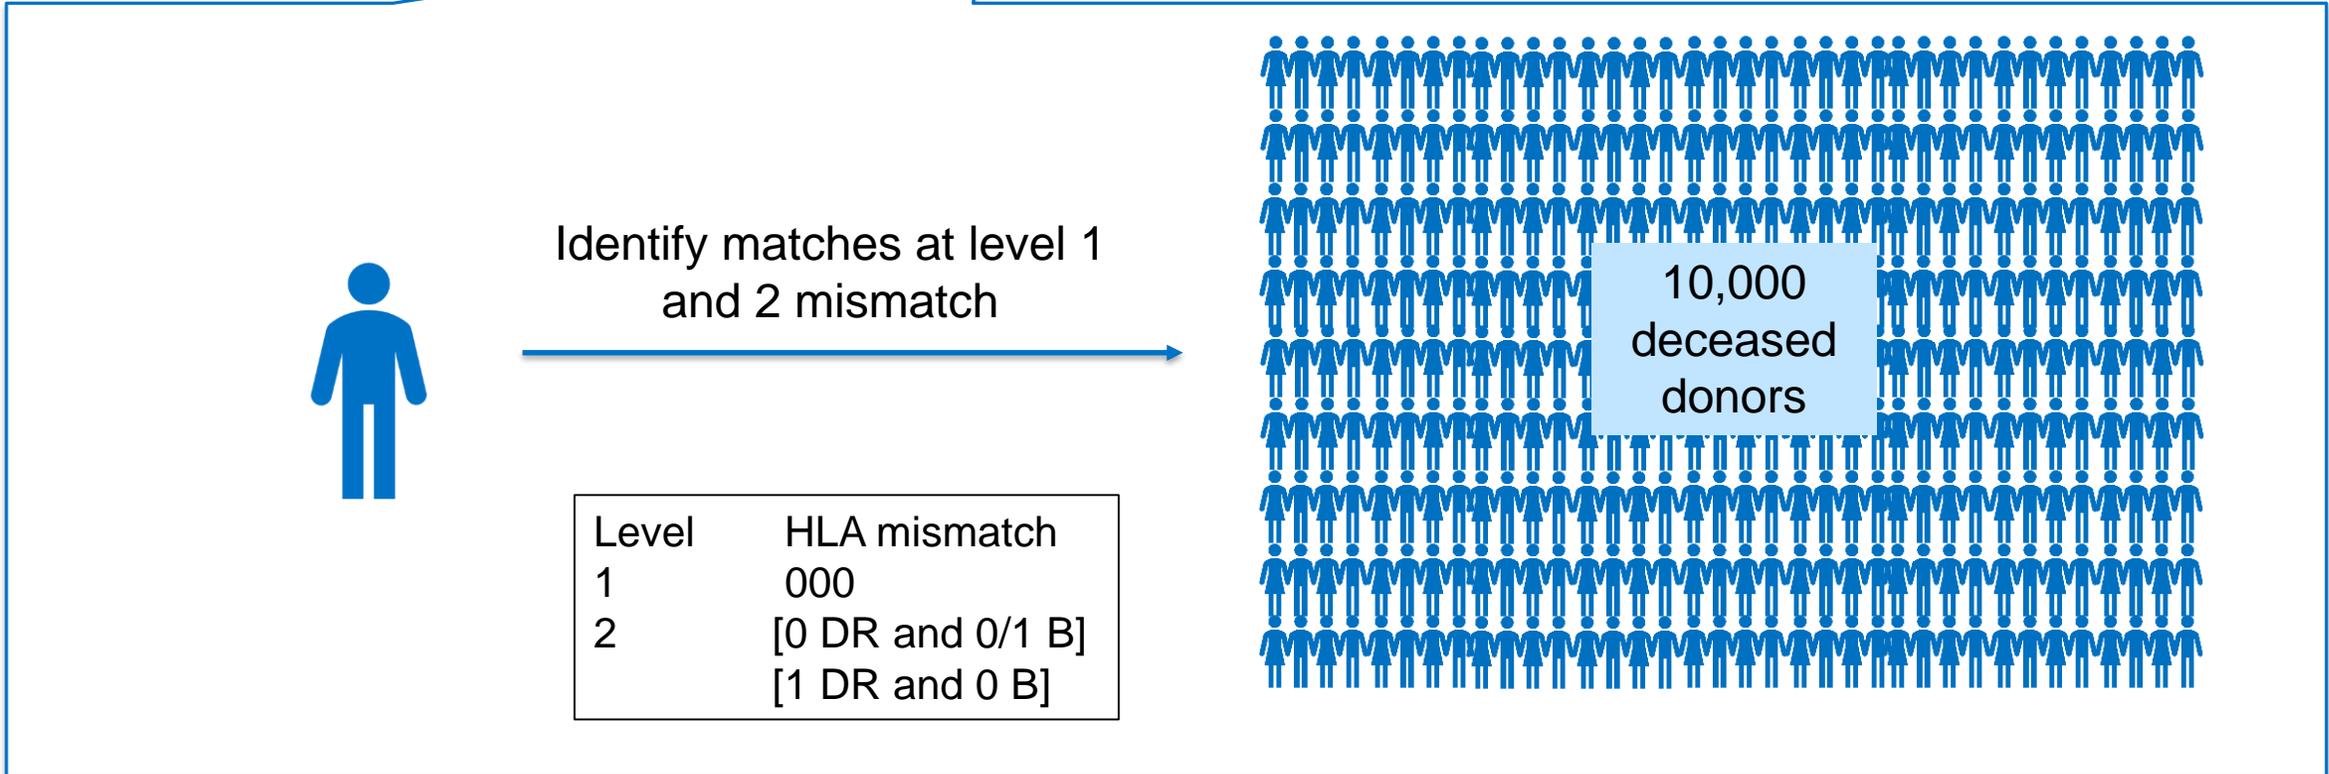

Allow HLA level 4 transplants for matchability score 8 and 9 only

Within Tier B; patients prioritised by point score

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

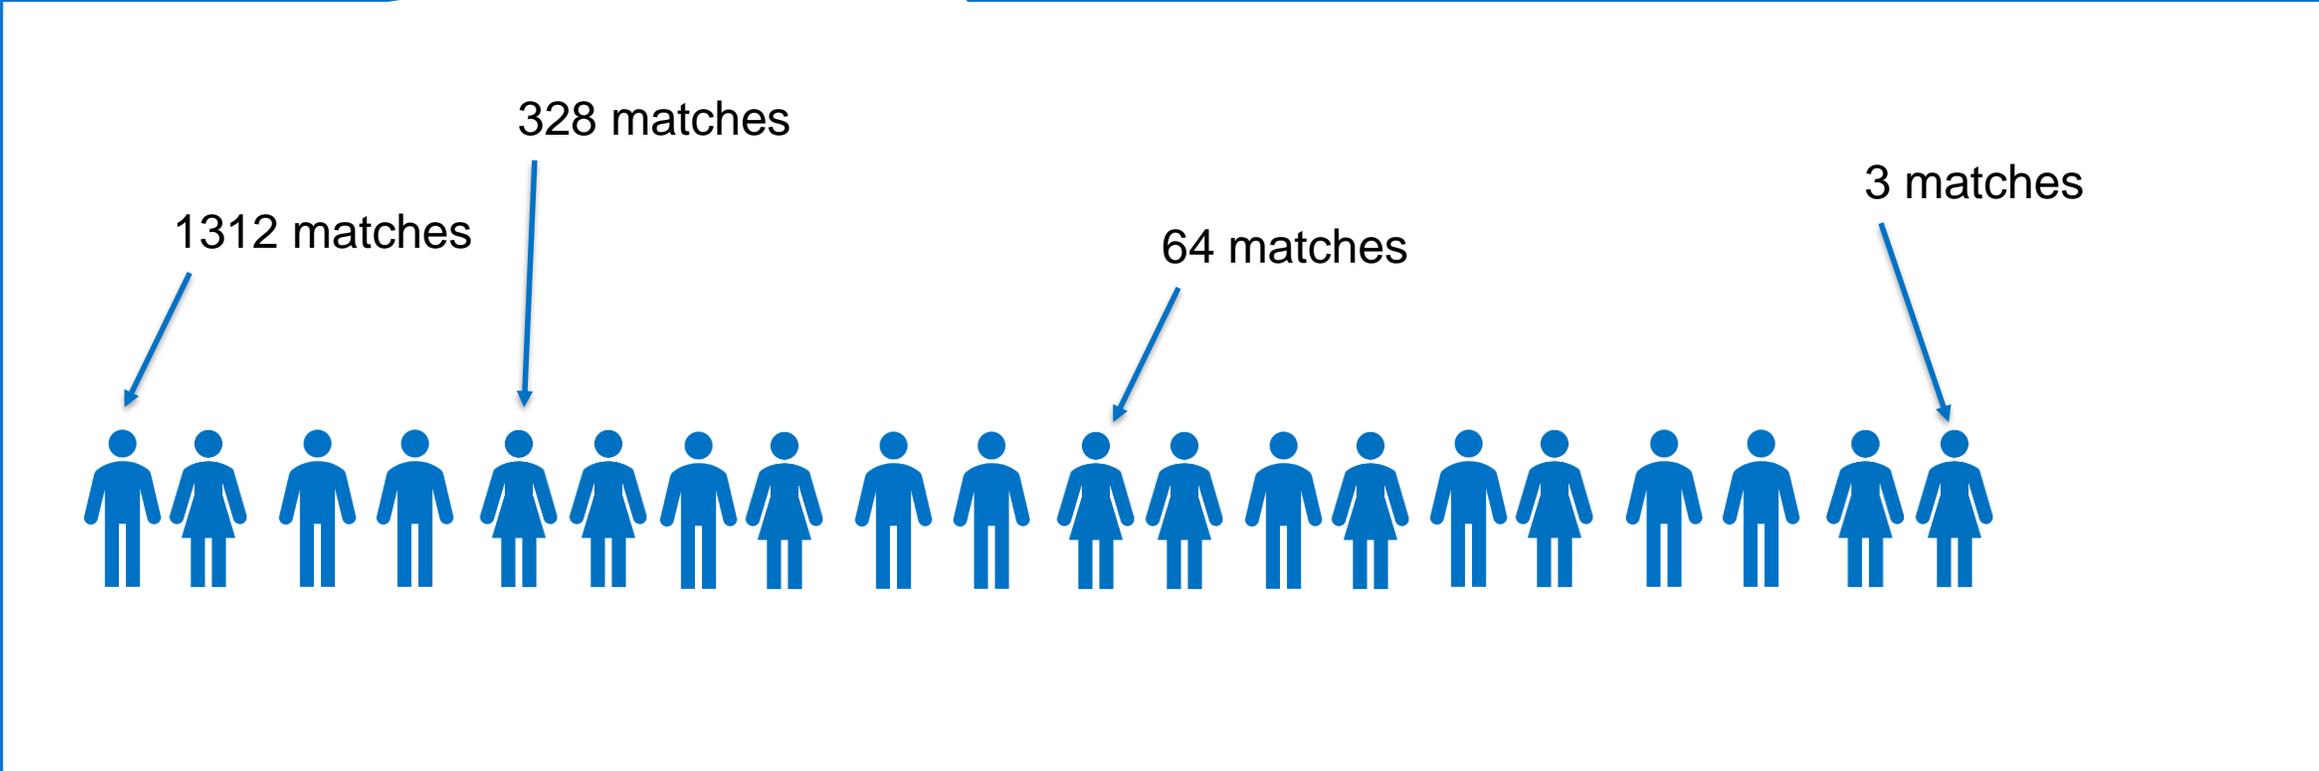

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

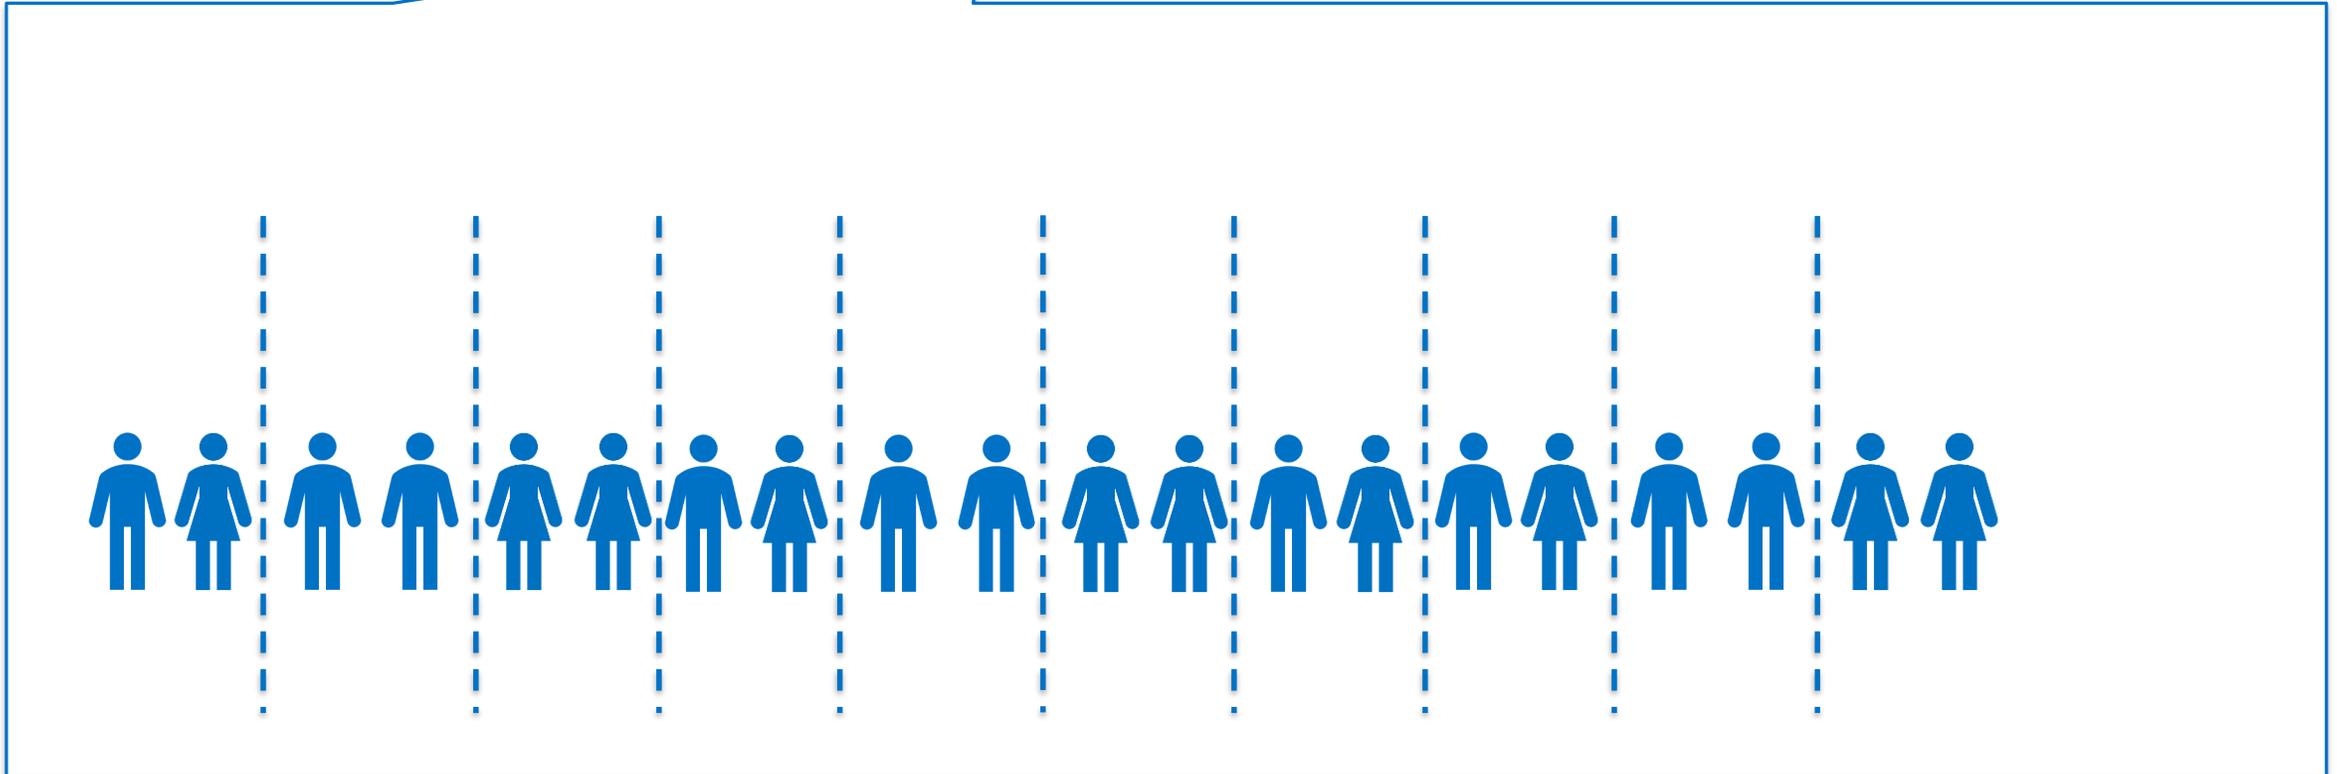

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

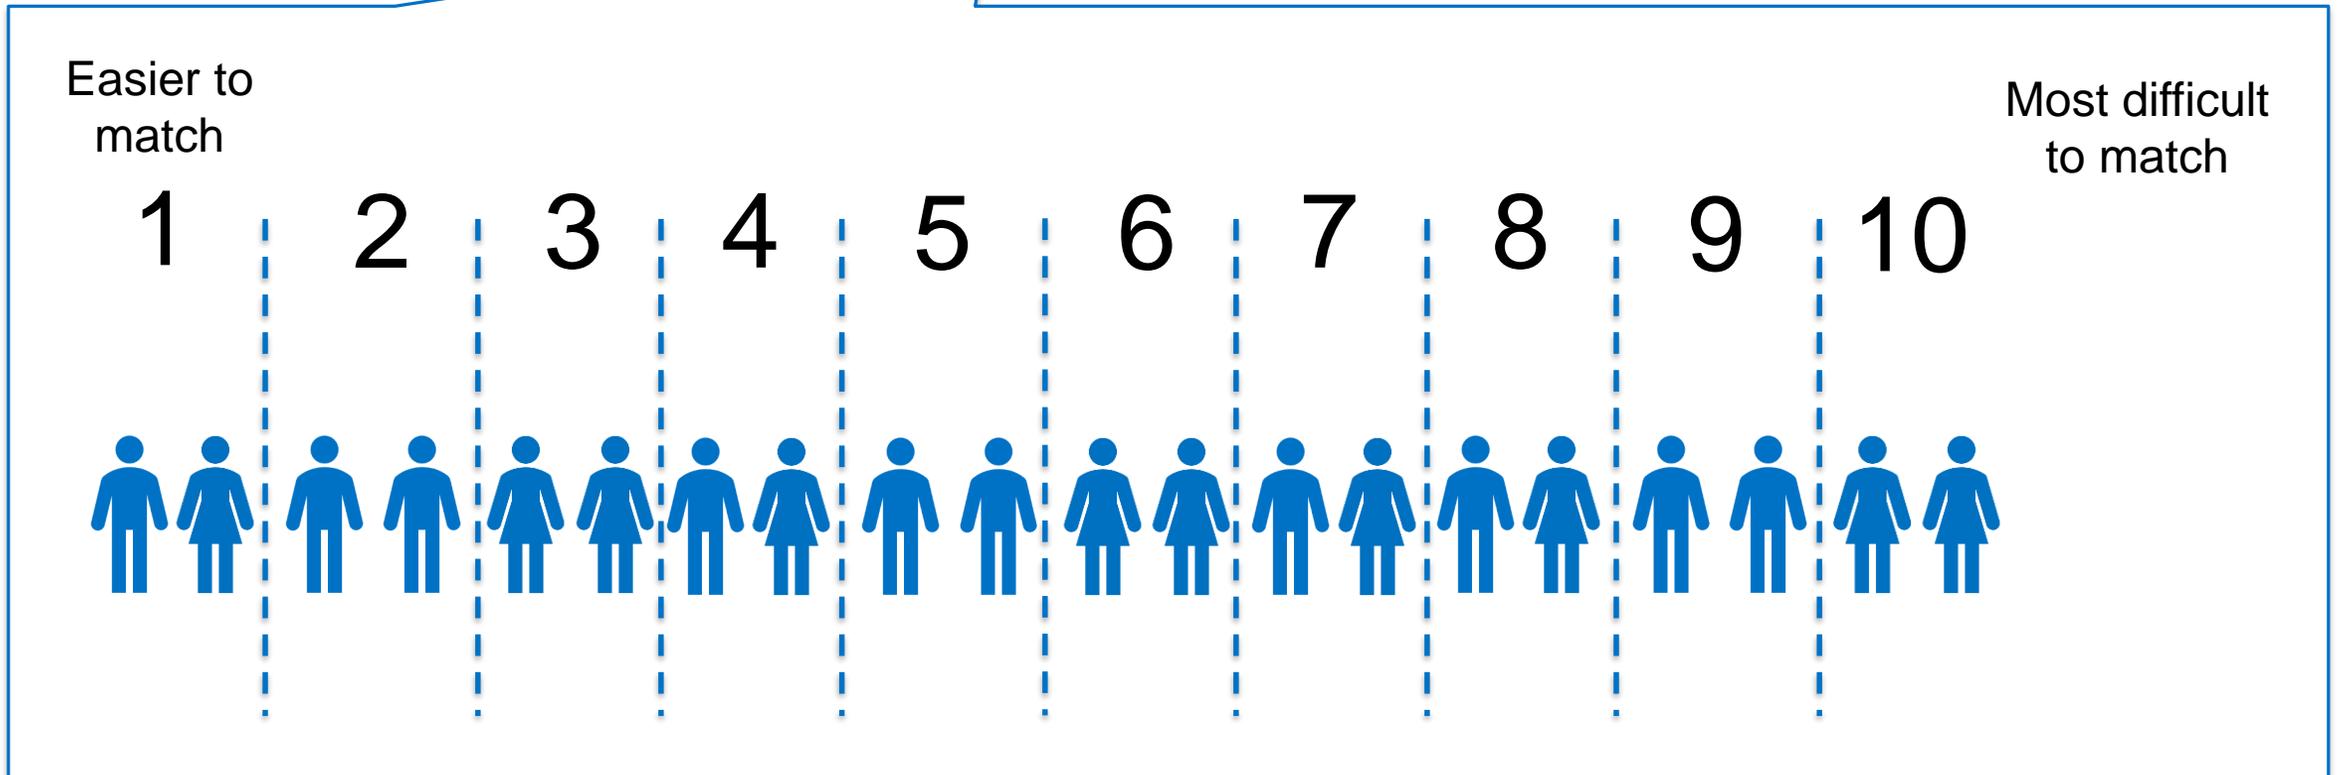

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

New Kidney Offering Scheme September 2019

All **deceased** donor kidneys are allocated through scheme:

Tier A Patients with matchability score = 10 or 100% cRF or ≥ 7 years

Allow blood group O to B, HLA level 4 transplants

Within Tier A; patients prioritised by matchability score and waiting time from dialysis

Tier B All other patients

Allow HLA level 4 transplants for matchability score 8 and 9 only

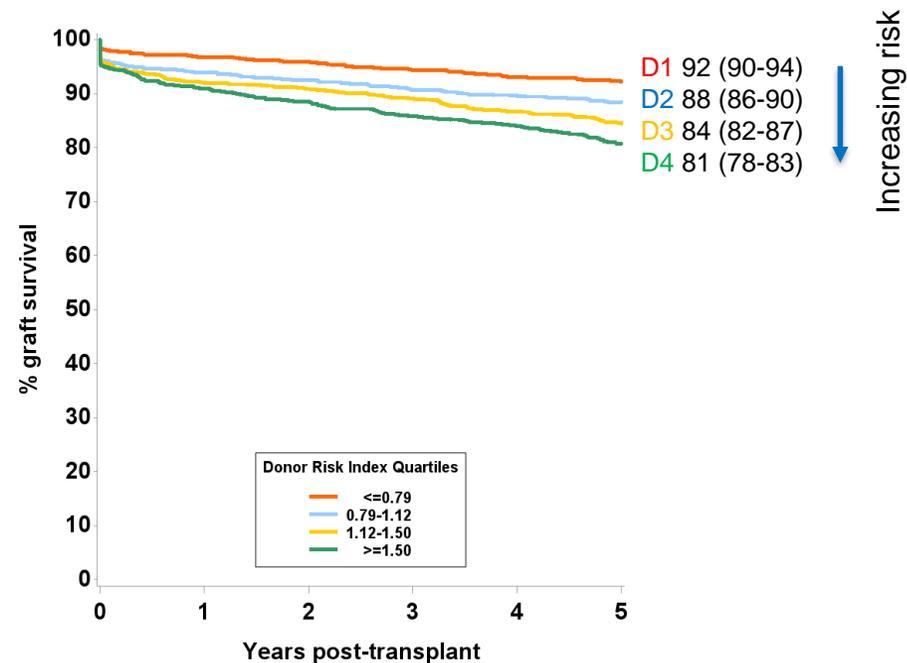

Within Tier B; patients prioritised by point score

Points score

Donor Risk Index

Cox model: 5 year graft survival

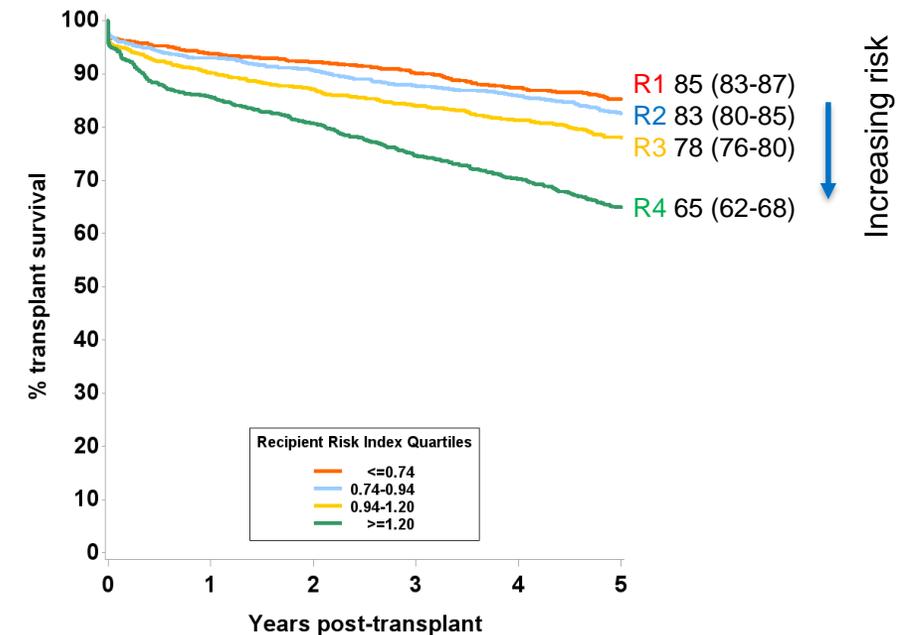

Donor Factor	Hazard Ratio	p-value
Age	1.02	<0.0001
Height	0.86	0.0005
Hospital stay	1.02	0.006
CMV	1.2	0.02
eGFR	0.98	0.02
Female	0.83	0.04
Hypertension	1.15	0.1

Recipient Risk Index

Cox model: 5 year transplant survival

Recipient Factor	Hazard Ratio	p-value
Age (≤ 25)	1.00	0.9
Age (> 25)	1.02	<0.001
Dialysis status	1.43	<0.001
Diabetic	1.32	0.003
Time on dialysis (years)	1.03	0.004

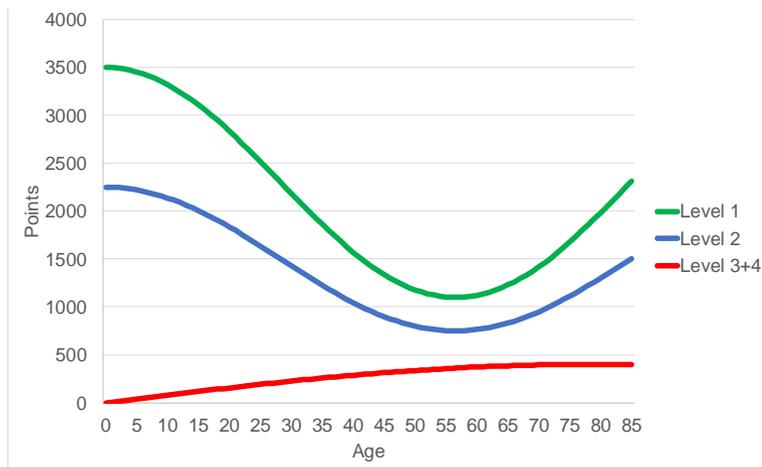

Points score

Donor and recipient risk index match

Donor Risk group	Recipient Risk Group			
	R1	R2	R3	R4
D1	1000	700	350	0
D2	700	1000	500	350
D3	350	500	1000	700
D4	0	350	700	1000

HLA and age combined points

- Level 1 $1200 * \cos(r\text{-age}/18) + 2300$
- Level 2 $750 * \cos(r\text{-age}/18) + 1500$
- Level 3+4 $400 * \sin(r\text{-age}/50)$

Waiting time points from dialysis

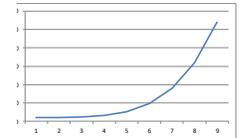

1 point will be awarded for every day

Location points

- DCD within region 1000 points
- DBD within region 500 points
- DCD within centre 1250 points

Matchability points

$$40 * (1 + \text{matchability score} / 4.5)^{4.7}$$

Total mismatch points (HLA-A,B,Cw,DR,DQ)

- =1 -100 points
- =2-3 -150 points
- =4-8 -250 points
- =9-10 -500 points

Age difference points

$$-\frac{1}{2} (\text{donor-recipient age difference})^2$$

Local allocation of kidneys

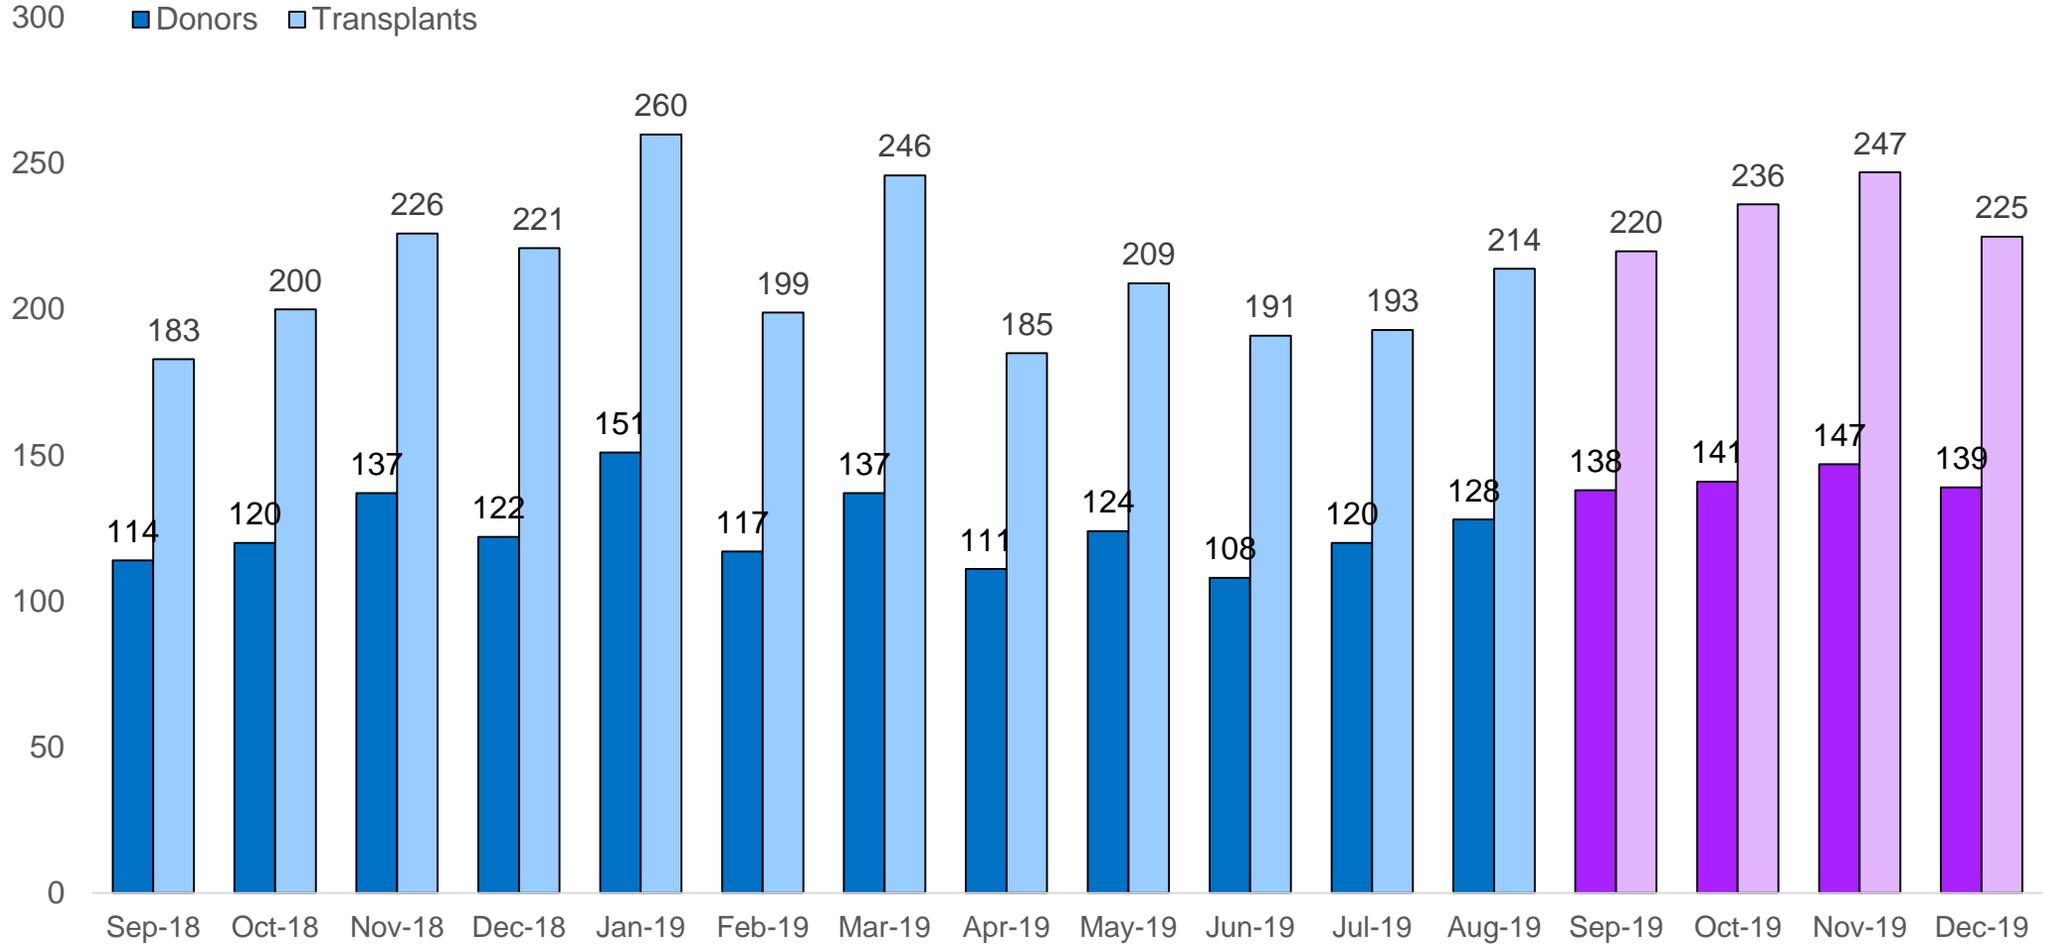

Kidneys will still be available through the scheme for centres to use in a patient of their choice:

- Kidneys from donors aged 2 - 5 will be offered to centres en-bloc
- Kidneys from D4 donors > 70 years will be offered to centres to use as dual or individually
- Kidneys dispatched but reallocated because intended patient cannot subsequently receive transplant, assuming no Tier A recipients are identified
- Kidneys offered through the Fast Track Scheme

Summary of the first three months

2019 Scheme: 11 Sep – 31 Dec 2019

Offer Activity

2019 Scheme: 11 Sep – 31 Dec 2019

Summary of kidney offers for named patients made through the 2019 scheme

1512 Offers:

- 588 (39%) Offers accepted and used
- 312 (21%) Offers accepted, not used in intended patient
- 612 (40%) Offers declined

Offer Declines

All patients – reason for decline of kidney offer, 11 September 2019 to 21 December 2019

262 (43%) Donor related reasons:

209 (34%) Recipient related reasons:

39 (6%) Organ related reasons

11 (2%) Centre related reasons

Discussion Points

- Delisting antibodies
- Level 4 mismatch offers
- Offers to paediatric patients

Delisting Antibodies

Delisting Antibodies

- Patients with cRF of 100% appear in Tier A
- Delisting antibodies may lead to a decrease in cRF and possibly moving into Tier B

How many more donors can a patient expect to match with
by removing antibodies?

Delisting Antibodies – 10,000 donor pool

- cRF is calculated using tissue types of the last 10,000 deceased donors, which is updated annually
- This number of donors equates to ~ 7 years in the scheme
- The most recent pool contains
 - 47% blood group O donors
 - 40% blood group A
 - 10% blood group B
 - 3% blood group AB

Delisting Antibodies – 10,000 donor pool

- Example: Recipient blood group O, cRF 100%

Delisting Antibodies – 10,000 donor pool

- Example: Recipient blood group O, cRF 100%

Delisting Antibodies – 10,000 donor pool

- The effect of delisting antibodies on the chance of receiving an offer will be different for each patient
- It will depend on the HLA type and antibodies listed for the individual but will likely match the patient with more donors and possibly lead to more offers
- If the patient has a matchability score of 10 or has been waiting >7 years, they will still appear in Tier A
- While delisting may result in a patient moving from Tier A to Tier B, the patient may still be ranked highly in Tier B depending on other characteristics
 - For example, patients with high matchability score will still place highly in Tier B

Level 4 Mismatch Offers

Level 4 mismatch Offers

- Level 4 mismatch offers are now available to named patients for the first time under the new scheme
- These offers are possible for patients in Tier A, and to patients with a mismatch score of 8 or 9 in Tier B
- Since the introduction of the new offering scheme, there have been 365 level 4 offers to named patients that been declined (48%)

Level 4 mismatch Offers

- Of those declined:
 - 35% were to patients with matchability score 10
 - 21% waiting more than 7 years
 - 9% with cRF of 95% or above

- 59% of these patients have now been transplanted
 - 70% were level 4 mismatch transplants

Level 4 mismatch offers – 10,000 donor pool

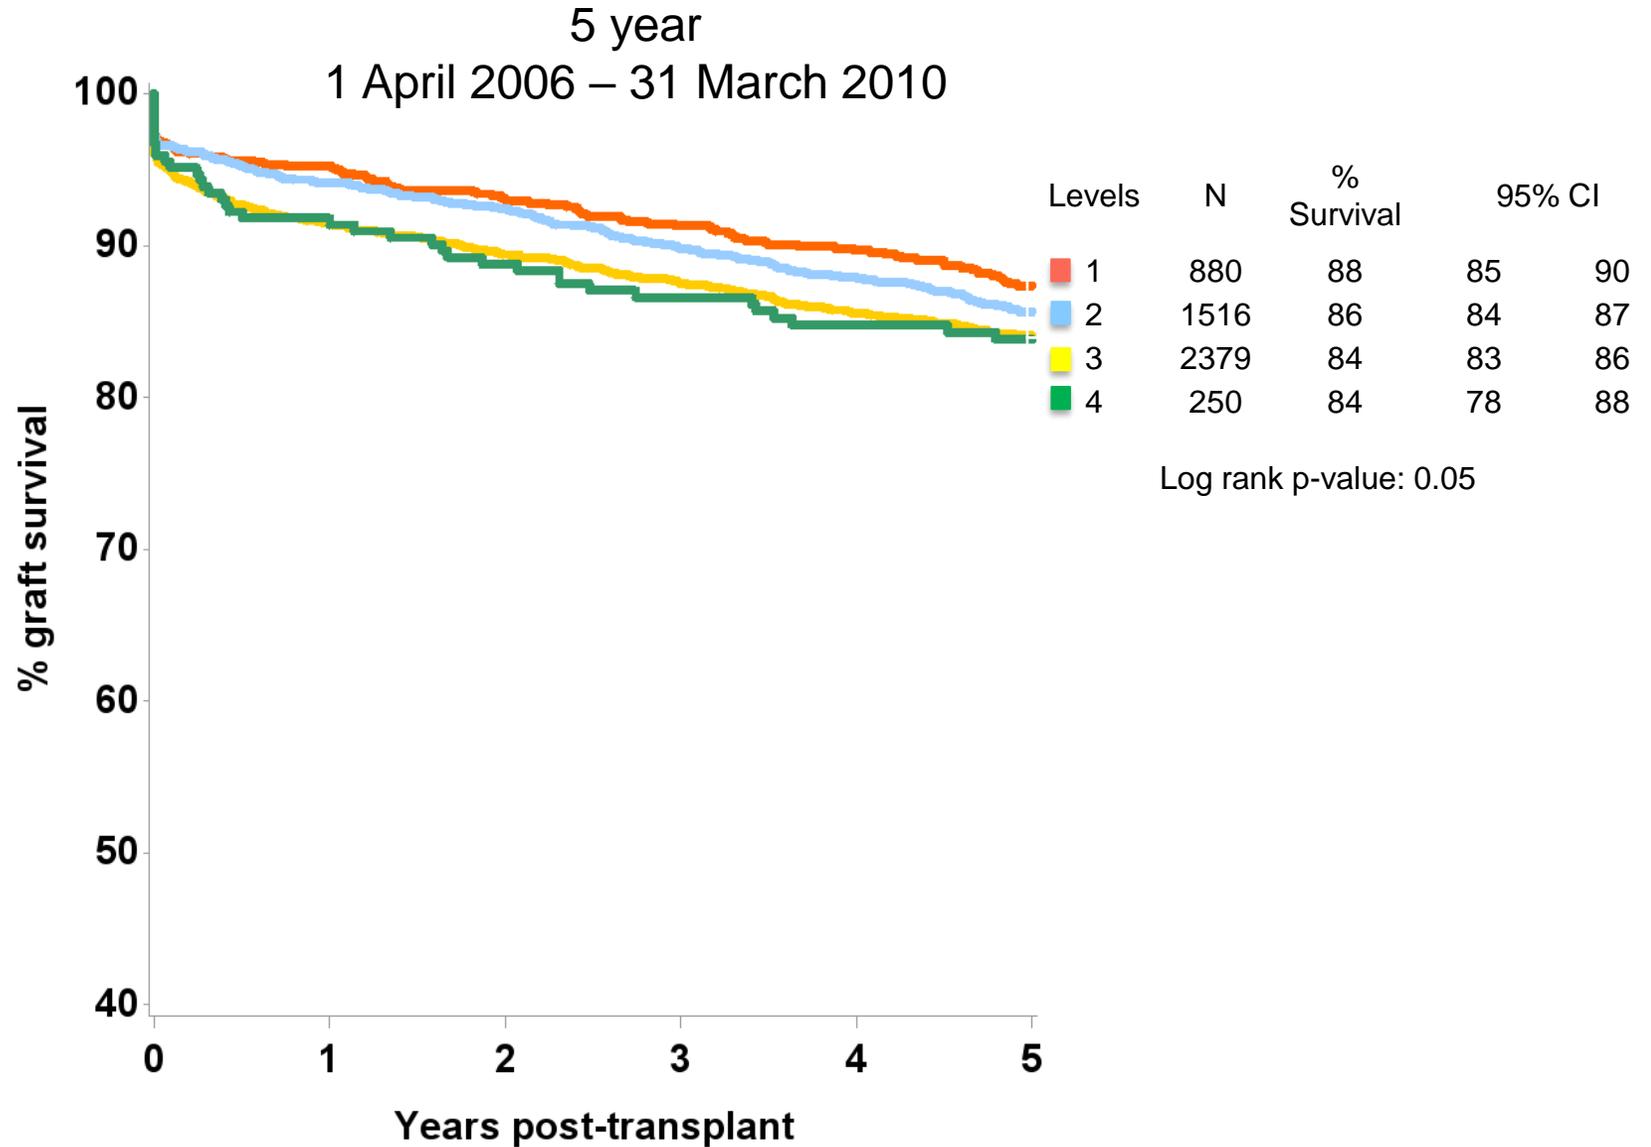

- Median number of matches in 10,000 donor pool for patients actively listed January 9th 2020

Matches	Matchability Score		
	8	9	10
Level 1	0	0	0
Level 2	40	7	0
Level 3	151	17	0
Level 4	709	19	0

- NHSBT is able to provide transplant centres with details on all patients listed with matchability score 8, 9 and 10 along with the number of matches in the 10,000 donor pool

Level 4 mismatch offers – Outcomes

Blood and Transplant

Offers to Paediatric Patients

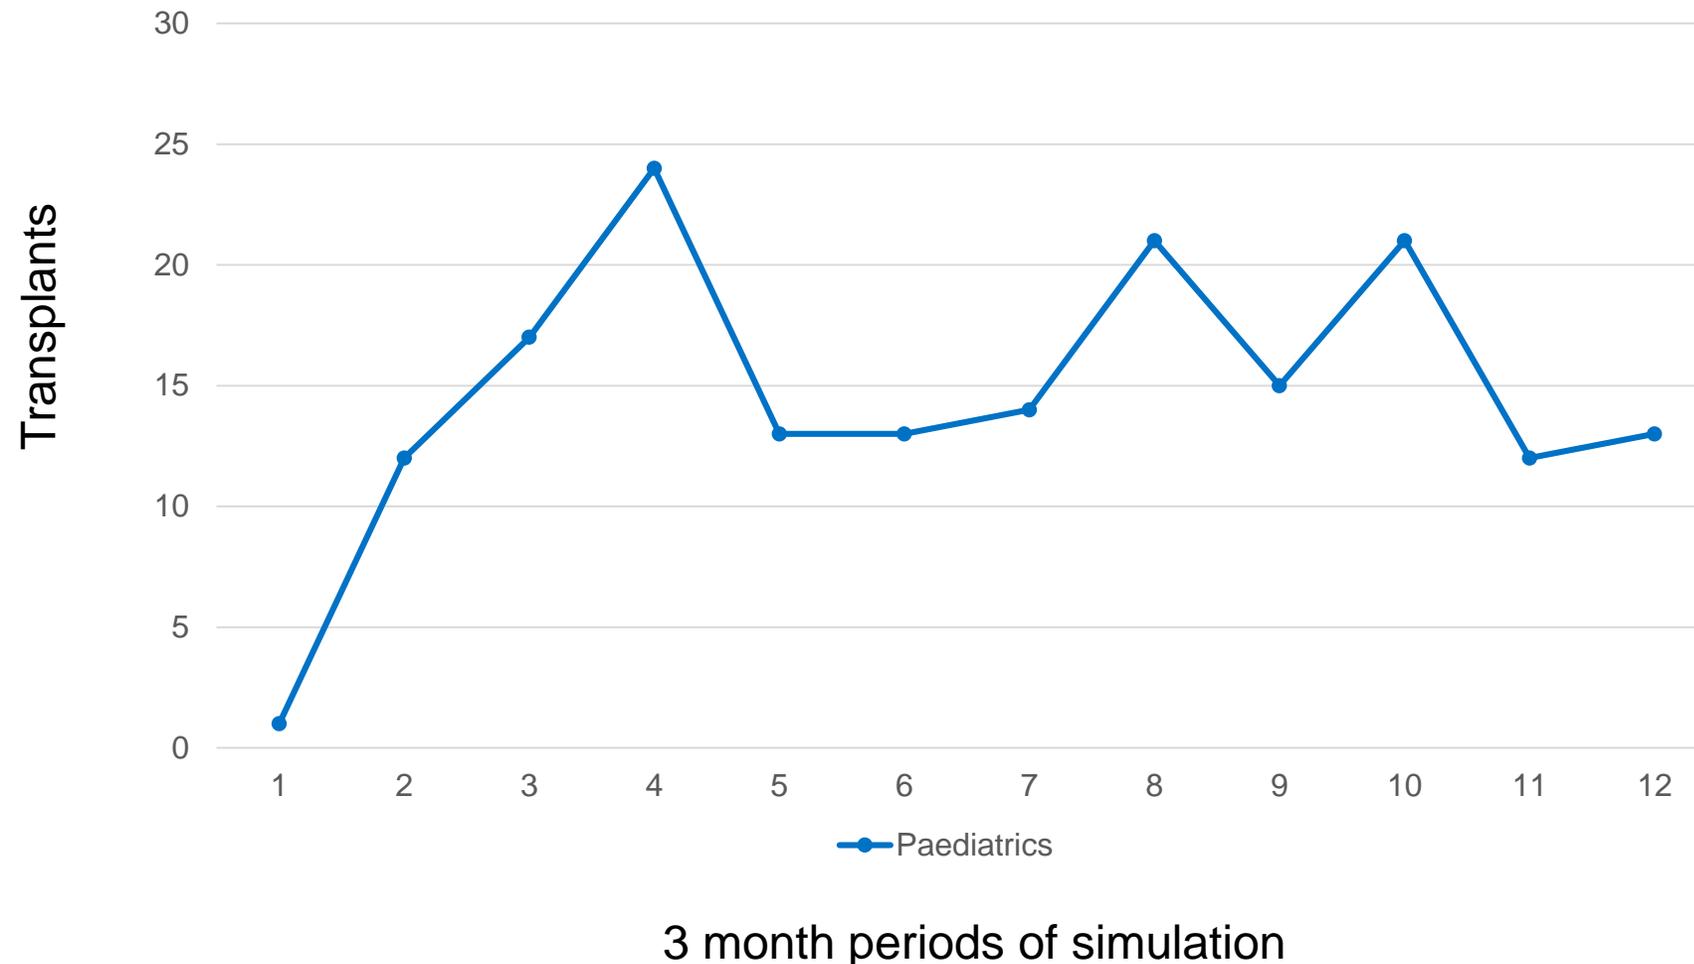

Offers to paediatric patients

- Between 11th September and 31st December 2019, there were 14 offers to paediatric patients, resulting in 5 transplants
- During the same period in 2018, there were 41 offers resulting in 15 transplants

Offers to paediatric patients

- Simulations predicted a reduction in offers to paediatric patients early in the scheme due to higher number of patients in Tier A, which is expected to reduce over time

Summary

- Designed to
 - Improve equity of access to a national resource
 - More effective 'longevity' matching between the donor and recipient
 - Avoid long waiting times that are predictable
- Scheme went live on 11th September 2019
- No impact on kidney activity
- Highly sensitised, difficult to match, and BAME patients have improved access to transplant
 - 35 100% cRF patients received a transplant, 13 have been waiting more than 5 years
- Overall, the scheme has met expectations of the first few months
- Transplant outcomes to follow in 6 month review at KAG
