

NHS BLOOD AND TRANSPLANT
CARDIOTHORACIC ADVISORY GROUP
FOLLOW-UP RETURN RATES

BACKGROUND

- 1 Following concerns raised in 2019 with some centres having poor follow-up form returns, in particular with lifetime follow-up, and their effect on the NHSBT cardiothoracic organ annual report, it was agreed that around April 2020, centres would be notified of their current form return rates in order for outstanding follow-up to be submitted before June, ahead of the NHSBT annual report being run.
- 2 This paper shows form return rates for forms issued post-transplant between 1 January 2019 and 31 December 2019, for patients being followed up after cardiothoracic transplant in the UK, as at 4 March 2020.

RESULTS

- 3 **Tables 1 – 4** show the follow-up form return rates for forms issued in 2019 for each centre, by age group and organ. For adult hearts, most rates are above 90%, however Harefield and Papworth both have lifetime follow-up return rates of 79%. All rates for adult lung forms are above 80%. For paediatrics, Great Ormond Street have low return rates across most forms for both hearts and lungs.
- 4 Please note that although these are forms issued in 2019, some may not yet have been chased for completion yet, which could partially explain any low rates.

ACTION

- 5 Centres are asked to ensure follow-up is up-to-date before June to enable us to complete the annual report on cardiothoracic transplantation.
