

# "Please speak to your male patients about plasma donation."

"Men who have had hospital care for Covid-19 are around six times more likely to have the high antibody levels which might save lives."

**Charlotte Washington**  
Consultant in Donor Medicine  
NHS Blood and Transplant

For more information and to register to donate visit [nhsbt.nhs.uk](https://nhsbt.nhs.uk)

**Please note:** Patients do need to be recovered for 28 days before donating. Receiving convalescent plasma in hospital doesn't exclude you from becoming a plasma donor.
