MHRA National Patient Safety Alert - Supply disruptions of sterile infusion sets and connectors manufactured by Becton Dickinson

Dear Colleague

The MHRA have asked that we highlight the National Patient Safety Alert they issued on 11 March concerning specific devices manufactured by Becton Dickinson. Becton Dickinson (BD) have notified MHRA that the sterility of some of their devices cannot be guaranteed due to quality issues with their third-party sterilisation provider. BD is recalling all affected stock of the following products:

- Infusion sets for specific Alaris pumps
- Gravity infusion sets and connectors

You can access the National Patient Safety Alert here, National Patient Safety Alert.

Kind regards
