

## NHS BLOOD AND TRANSPLANT

### CARDIOTHORACIC ADVISORY GROUP – HEART

ADJUDICATION PANEL REFERRALS 26 OCTOBER 2016 – 28 FEBRUARY 2021

#### INTRODUCTION

1. Patients are referred to the CTAG Heart Adjudication Panel where they do not meet the standard listing criteria for urgent or super-urgent heart transplant listing.
2. The Adjudication Panel is made up of the CTAG Chair plus one representative from each of the 7 designated heart transplant centres. The registering centre must provide the panel with relevant details by email. The patient may be registered if the majority agree on the case for listing but if the panel cannot reach a consensus, the CTAG Chair has the casting vote.
3. For paediatric patients requiring small donors (a maximum acceptable donor size has been specified to be <160cm in height and <60kg in weight), rather than the full Adjudication Panel, the case must be referred to the CTAG Chair and a representative from the other paediatric centre for approval.
4. Since October 2016, Statistics and Clinical Studies have kept records of all Adjudication Panel referrals and whether the request was approved or rejected.
5. This paper reports on Heart Adjudication Panel referrals between 26 October 2016 (the date of the introduction of the super-urgent heart allocation scheme) and 28 February 2021. It also reports on urgent heart-lung adjudication panel referrals between 26 October 2016 and 28 February 2021, which are referred to the Lung Adjudication Panel but sometimes also the Heart Adjudication Panel, if standard urgent heart listing criteria are not met. Referrals for Total Artificial Heart (TAH) implantation are not presented.

#### RESULTS

6. Between 26 October 2016 and 28 February 2021, there were 114 adult referrals and 24 paediatric referrals to the Heart Adjudication Panel for urgent or super-urgent listing.
7. Of the 114 adult appeals, 95 were for urgent listing and 19 for super-urgent listing with approval rates of 83.2% and 47.4% respectively as shown in **Table 1** and **Table 2**. All except one of the paediatric appeals were approved and are shown in **Table 3**. The number of urgent or super-urgent registrations (both via the panel and those meeting standard listing criteria) are provided for reference in the tables.
8. Of the 95 urgent adult appeals, 72 (76%) of the recipients had a long-term VAD implanted at time of application. Within the time period, Harefield had the highest number of urgent adult appeals and also had the highest number of urgent registrations.
9. For the super-urgent adult appeals, 8 (42%) of the 19 cases had a long-term VAD implanted at time of application and Harefield and Manchester had equally the highest number of appeals and Harefield had the most registrations over this period.

10. Between 26 October 2016 and 28 February 2021, 27 appeals were made for heart-lung listing, 22 of which were for urgent listing and 5 for super-urgent listing. Of the total of 27 appeals, 19 (70.4%) were approved as shown in **Table 4**. In the time period, Harefield had the highest number of heart-lung appeals and also the highest number of urgent heart-lung registrations (including two super-urgent).

11. Please note that when referring to the tables below, a patient whose appeal was approved may still not be registered due to reasons such as deteriorated health.

## ACTION

12. This report is provided for information and to monitor the number of Adjudication Panel referrals and the approval rates. Members are welcome to make any comments.
