

**Liver Advisory Group  
ODT Clinical Governance Report November 2021**

**1. Status – Confidential****2. Action Requested**

LAG are requested to note this report and respond to the question raised below.

**3. Data****4. Learning from reports**

in the period since the last LAG meeting there are no relevant cases currently to report to LAG for discussion or oversight.

There was however a query raised via the Incident Reporting System with regards to non-alignment of documents:

**Date reported: 19<sup>th</sup> August 2021**

Reference: INC 5716

What was reported
Transplant centre identified a discrepancy between the National Standards for Organ Retrieval from Deceased Donors (MPD1043/9) and the Kidney Transplant Record Form (FRM4138/2) with regards to calculation of cold ischaemic time (CIT)
Review of documents
<p><b>National Standards for Organ Retrieval from Deceased Donors:</b>  “5.11. The transplant centre should record the time that the organ arrived at the centre and the time that the organ was transferred from cold solution into the operative field (i.e. end of cold ischaemia time).”</p> <p><b>Kidney Transplant Record:</b>  “Section 3 'Operative Details'”</p>

Kidney removed from ice: date/time Kidney perfused with recipient's blood: date/time Cold ischaemic time (elapsed time from start of perfusion to time kidney perfused with recipient's blood: hrs/min"
Learning
LAG to discuss and agree the correct calculation of CIT in order that the documents reflect this and are aligned.

**6 Requirement from LAG**

INC 5716

- Discuss and agree the correct calculation of CIT
