

## Updates

A huge thank you to site teams for the hard work getting the study set up - we're now recruiting at **71 Trusts/Boards across the UK (>110 individual Hospitals).**

Since the last newsletter was published, we have been joined by:

- St Richard's and Worthing hospitals (University Hospitals Sussex NHS Foundation Trust)
- University College London Hospitals NHS Foundation Trust
- Northern Lincolnshire and Goole NHS Foundation Trust

We have several Trusts who are close behind and the following will be joining soon:

- University Hospitals Birmingham NHS Foundation Trust
- Sandwell and West Birmingham Hospitals NHS Trust
- Swansea Bay University Health Board
- South Tyneside and Sunderland NHS Foundation Trust

## SNOD Feedback

In conjunction with the NHSBT Professional Development Specialist (PDS) team, we're running some feedback sessions for the Specialist Nurses.

The first one will be on the 16th November and we'll hold another in December. Please keep any eye out for the Outlook invite.

## SIGNET Recruitment

## Tips for prescribing the Simvastatin

If there are any questions about prescribing or if the wrong Statin is prescribed, you can point the prescriber in the direction of the study manual or ICU poster

Make sure the ICU team are aware of SIGNET and that it needs to be Simvastatin prescribed. You can use the video or cascade slides on our website

If you have an electronic prescribing system, you can add Simvastatin as a research drug

Get in touch with the SIGNET team if you have any suggestions or questions

## Message from our Chief Investigators

John and Dan at the BTS Congress - 70s themed gala dinner!

"It has been fantastic to see SIGNET grow and open in so many sites, and we've been excited by the enthusiasm of SNODs, families and ICU teams in supporting organ donation research.

Just as every single potential organ donor is vital to recipients, every single randomised donor is vital for the success of the study, and we're grateful to every SNOD and family who agrees to take part. SIGNET is a great opportunity to improve the quality of evidence that supports donation and transplant, thank you for making it happen"

## Tips for MACRO Data Entry

The SIGNET data monitoring committee are meeting in October 2022. It is important that the data on MACRO is as complete as possible so that it can be used. Here are our tips for data entry:

 Double check the ODT donor ID is the correct number - this is used to link the data; if the donor ID is incorrect we cannot use the data.

 Make sure there is no missing data

 Enter your donors on MACRO as soon as possible. If the donor is not on MACRO we cannot use their data.

 If you create a new empty subject - please use this for your next donor if they are from the same hospital.

 If you open the SAE form when there is no SAE to report you can close the form without saving. If you save the form you will need to delete all data and comment to show the data is 'n/a'.

 You will need to respond to the query even if you have updated the data, so that the red flag turns blue.
