Patient dissented

GP Connect pros

- **Saves time**: follow up of blood test results

- Most up to date information for all patients: background data or medication dose changes

- Highlights any concerns raised by GP

- Manage medication to optimise therapy remotely

GP Connect cons

- Basic

- Navigation is not intuitive and extraction of data is old fashioned

- Results only visible when GP received results have been saved to the record – different agreements with pathology departments

- Covers England only

- Not all patients consented

Summary:

Basic access to information, but saves time and assists in timely clinical decision making.
