

## Jersey

### Taking Organ Transplantation to 2020

Jersey had one consented donor during this time period and this patient did proceed to be an actual solid organ donor resulting in one patient receiving a life-saving or life-changing transplant. Data obtained from the UK Transplant Registry.

### Best quality of care in organ donation

We acknowledge that the data presented in this section includes the period most significantly impacted by COVID-19 and appreciate that the COVID-19 pandemic affected Trusts/Boards differently across the UK.

#### Referral of potential deceased organ donors

**Goal: Every patient who meets the referral criteria should be identified and referred to NHS Blood and Transplant's Organ Donation Service**

**Aim: There should be no purple on the chart**

The Trust referred 2 potential organ donors during 2020/21. There were 2 occasions where potential organ donors were not referred.

## Presence of Specialist Nurse for Organ Donation

**Goal: A Specialist Nurse for Organ Donation (SNOD) should be present during every organ donation discussion with families**

**Aim: There should be no purple on the chart**

A SNOD was present for 1 organ donation discussion with a family during 2020/21. There were no occasions where a SNOD was not present.

### Why it matters

- If suitable patients are not referred, the patient's decision to be an organ donor is not honoured or the family does not get the chance to support organ donation.
- The consent rate in the UK is much higher when a SNOD is present.
- The number of patients receiving a life-saving or life-changing solid organ transplant in the UK is increasing but patients are still dying while waiting.

## Further information

Further information on potential donors after brain death (DBD) and potential donors after circulatory death (DCD) at the Trust are shown below, including a UK comparison. Data obtained from the Potential Donor Audit (PDA).

	DBD		DCD		Deceased donors	
	Trust	UK	Trust	UK	Trust	UK
Patients meeting organ donation referral criteria <sup>1</sup>	1	1810	3	6027	4	7551
Referred to Organ Donation Service	1	1777	1	4770	2	6282
<i>Referral rate %</i>		98%		79%		83%
Neurological death tested	1	1490				
<i>Testing rate %</i>		82%				
Eligible donors <sup>2</sup>	1	1353	3	2860	4	4207
Family approached	1	1210	0	1042	1	2248
Family approached and SNOD present	1	1168	0	925	1	2089
<i>% of approaches where SNOD present</i>		97%		89%		93%
Consent ascertained	1	891	0	665	1	1553
<i>Consent rate %</i>		74%		64%		69%
Actual donors (PDA data)	1	777	0	404	1	1180
<i>% of consented donors that became actual donors</i>		87%		61%		76%

<sup>1</sup> DBD - A patient with suspected neurological death  
DCD - A patient in whom imminent death is anticipated, ie a patient receiving assisted ventilation, a clinical decision to withdraw treatment has been made and death is anticipated within 4 hours

<sup>2</sup> DBD - Death confirmed by neurological tests and no absolute contraindications to solid organ donation  
DCD - Imminent death anticipated and treatment withdrawn with no absolute contraindications to solid organ donation

Note that a patient that meets both the referral criteria for DBD and DCD organ donation is featured in both the DBD and DCD data but will only be counted once in the deceased donors total
