

NHS BLOOD AND TRANSPLANT
CARDIOTHORACIC ADVISORY GROUP

**SUMMARY OF CUSUM MONITORING OF OUTCOMES FOLLOWING
LUNG TRANSPLANTATION**

- 1 Since the last report presented at the September 2014 CTAG meeting, there have been two signals following adult lung transplantation. The first signal occurred following a transplant in April 2014 at Birmingham and the second occurred following a transplant in July 2014 at Newcastle.
- 2 In terms of the signal at Birmingham, the centre has undertaken a thorough investigation with recommendations in place.
- 3 In terms of the Newcastle signal, a full analysis was undertaken and it was concluded that there was no systematic cause for concern.
