

I'm
blood
type

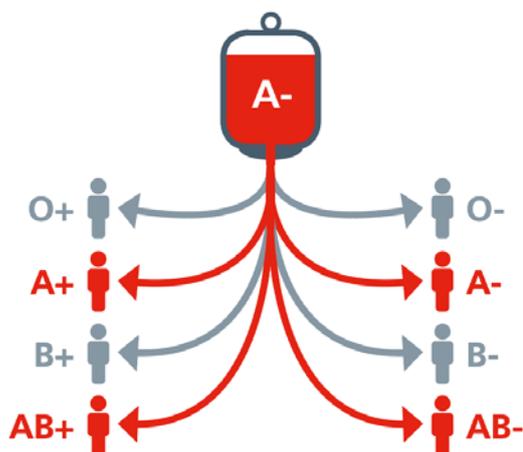

Your blood type is likely to be A negative

Only about 8% of people have A negative blood, which can be used to treat around 40% of patients.

You're somebody's type

Your A negative red blood cells can be used to treat patients with blood types A positive, A negative, AB positive and AB negative.

(You can receive transfusions from A negative, A positive, O negative or O positive donors.)
