

I'm
blood
type

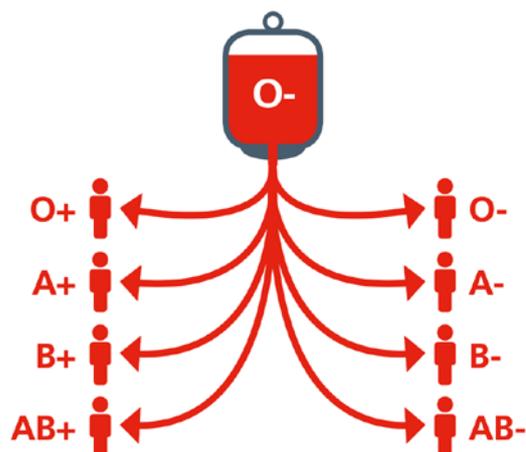

Your blood type is likely to be O negative

Around 13% of our blood donors have O negative blood.

Ambulances carry O negative blood for emergencies. Collecting enough is a constant challenge and we always need your donations.

You're somebody's type

O negative donors are often called 'universal donors' because anyone can receive the red blood cells from your donations.

(You can only receive transfusions from O negative donors.)
