

Proposal to Change the Upper Age Limit for Offers from Lung Donors

Appendix

1) All donors aged 65-75, who donated at least one organ, with no cardiothoracic disease and not smokers, regardless of consent for lung donation

All solid organ donors aged 65-75 with no history of smoking and no history of cardiothoracic disease							
Donor Type		2012/13	2013/14	2014/15	2015/16	2016/17	Total
DBD	All	60	66	69	79	41	315
	Offered	22	21	25	35	16	119
	Donated	3	5	7	2	2	19
	Transplanted	3	4	7	2	2	18
DCD	All	60	81	59	66	44	310
	Offered	5	13	0	3	1	22
	Donated	0	1	0	1	0	2
	Transplanted	0	1	0	1	0	2

2) Lack of any relation between Donor PO2 and outcome

Does donor arterial partial pressure of oxygen affect outcomes after lung transplantation? A review of more than 12,000 lung transplants (Zafar F et al J Thorac Cardiovasc Surg 2012;143:919-25)
